Made to measure. *Made to last.*

Planet-friendly water tanks

Made-to-measure, to fit your way of life.

Made-to-measure.

Get the tank that perfectly fits your space and your lifestyle with our unique made-to-measure system. Choose the width, length and height of your new tank, say goodbye to wasted space, and make the most of your water storage.

Made to last.

Our high quality steel water tanks are polymer coated to withstand the harsh Australian environment. A Tankworks steel tank has a smaller carbon footprint than a polyethylene or concrete tank. The steel used in construction is 100 percent recyclable, making our tanks the sustainable choice for your future.

Conserve water, and preserve your way of life.

Rainwater tanks are a proven performer in assisting with water conservation. Using your tank for outdoor tasks will help reduce your mains water demands significantly. You can take this a step further and connect to your toilet and washing machine to really maximise your savings and contribution to water conservation.

Outstanding quality at an affordable price.

Tankworks have been manufacturing steel water tanks since 1934. Our tanks are fully engineered and meet AS4020 standard for storage of drinking water. They are strong, lightweight and corrosion resistant and they won't crack as a result of ageing and sun exposure.

Create your made-to-measure tank in minutes.

Visit us online at www.tankworks.com.au and follow the links to the Size-a-lator to create your ideal tank in minutes.

- ▶ Select your style, slimline, modline, square or round.

- ▶ Select your own measurements to suit your space.

- ▶ Select your own colour to match your home. See it rendered on your tank instantly.

- ▶ Select your own fitting locations.
