LONG LASTING
Made from UV Stabilised Polyolefin

WATER CHANNELS
Designed to prevent moisture build up

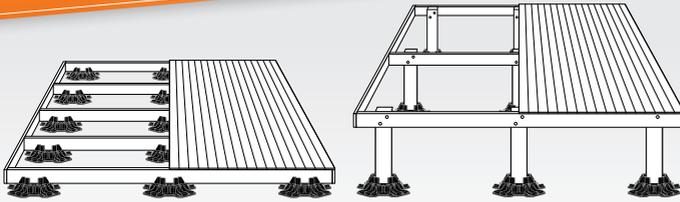

ECO FRIENDLY
100% Recycled and Recyclable

ULTRA LOW DESIGN
Build low profile decks as low as 140mm

FOR BOTH LOW PROFILE AND RAISED DECKS

Multi-purpose foundation for a range of home improvement projects including decks, garden sheds, landings, pathways, raised walkways, cubby houses, dog shelters and more.

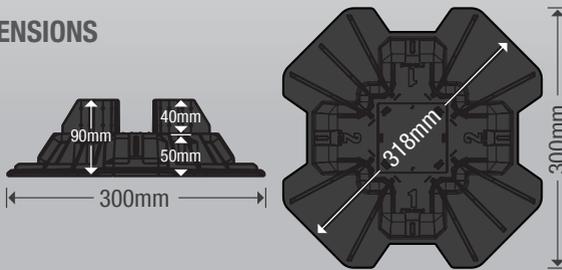

An individual TuffBlock has been designed to support over 770kgs and successfully tested to over 5,000kgs and weighs only 0.7kg. Designed to accept 90mm and 100mm Posts and various sized Joists from 35mm all the way through to 47mm, TuffBlocks truly are the lightest, most versatile and easy to use deck foundation system on the market.

TuffBlock's are made of high strength closed loop recycled polyolefine material with an ultra high UV rating. Designed with a ventilated underside to prevent moisture buildup and deter termites. TuffBlock's are the only block product that are able to be secured to the post/bearer for extra stability.

Unique to the TuffBlock is the ability for low level decking, it is now possible to build a deck as low as 140mm without the need for digging.

No more ugly concrete blocks in your yard. The slimline profile and satin black finish means a TuffBlock easily blends into the landscape and surrounds.

DIMENSIONS

INSTALLATION

Maximum 1.5 metres Spacing between TuffBlocks

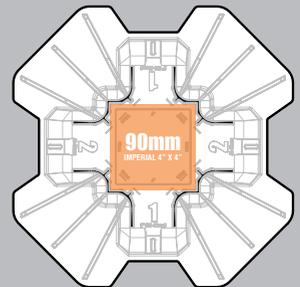

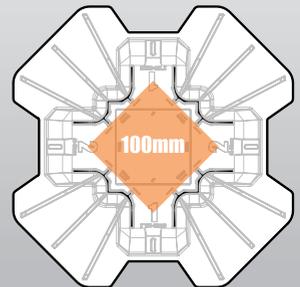

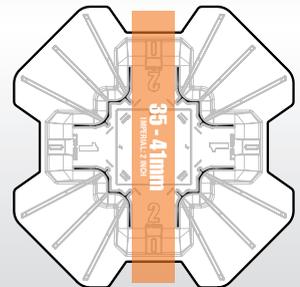

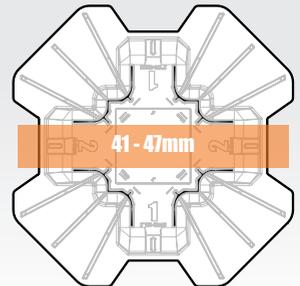

Set-up for 2400mm, 3000mm and 3600mm Support Boards

Set-up for Support Boards End to End

The general rule of thumb is to space joists at 18" centers (maximum). This spacing depends on your decking or platform material so check with your timber supplier for project specific recommendations. Joists can sit directly on TuffBlocks (e.g. TuffBlock - joists - decking/platform) or on top of a substructure (e.g. TuffBlock - bearers - joists - decking/platform).
