Products You Will Need

- Dulux Copper Effect** paint and **Dulux Copper Patina Effect** solution
- Quality masking tape
- A paint stirrer and drop sheet
- Medium nap roller, roller tray and a 100mm paint brush
- Depending on the look you are after – a wide brush, roller or muslin may be used
- Wide-top shallow container for the **Copper Patina Effect** solution

Preparation

- Carefully read and follow the instructions on the product label before you begin.
- Mask off the area with painters tape – where you don't want any paint, such as adjacent walls.
- Stir the paint well with a paint stirrer using an up and down scooping action. Make sure you scrape the bottom of the can to ensure particles are evenly distributed.
- Practice your application technique on a large, spare piece of board.

Application

- Brush around the edges of the wall or area you are painting.
- Apply the first base coat of the **Copper Effect** with a brush or a roller, as you would normally paint.
- Working in small sections, apply the second coat with a roller.
- While the paint is still wet create an effect. Using a wide brush, dry roller or muslin drag it in a random, overlapping pattern.
- If using **Copper Patina Effect**, apply when **Copper Effect** is touch dry (after 2 hours but within 12 hours).
- Apply **Copper Patina Effect** solution by brush or muslin in a random pattern.
- The aged effect will continue to develop over days and weeks.
- A second coat of **Copper Patina Effect** can be applied if required (within 12 hours of the final **Copper Effect** coat). This won't deepen the effect, but fill in patches that were missed initially.

Handy Tips

- The level of patina will vary depending on drying time and application method.
- The patina can be rubbed off when touched. On exterior surfaces, patination run-off may stain adjacent surfaces.
