**SPECIFICATIONS**

- **Input**: 18V
- **No Load Speed**: 2,500/min
- **Pad Diameter**: 254mm (10”)
- **Weight**: 1.8kg

**WHAT’S IN THE BOX**

- Buffer Polisher
- Application Bonnet (Towelling)
- Polishing Bonnet (Fleece)
- Battery & Charger

**IN ORDER TO MAKE A CLAIM UNDER THIS WARRANTY YOU MUST RETURN THE PRODUCT TO YOUR NEAREST BUNNINGS WAREHOUSE WITH YOUR BUNNINGS REGISTER RECEIPT. PRIOR TO RETURNING YOUR PRODUCT FOR WARRANTY PLEASE TELEPHONE OUR CUSTOMER SERVICE HELPLINE:**

- **Australia**: 1800 069 486
- **New Zealand**: 0508 069 486

**WARNING**

The following actions will result in the warranty being void.

- If the tool has been operated on a supply voltage other than that specified on the tool.
- If the tool shows signs of damage or defects caused by or resulting from abuse, accidents or alterations.
- Failure to perform maintenance as set out within the instruction manual.
- If the tool is disassembled or tampered with in any way.

**5 YEAR REPLACEMENT WARRANTY**

Your Product is guaranteed for a period of 60 months from the original date of purchase and is intended for DIY (Do It Yourself) use only. If a product is defective it will be replaced in accordance with the terms of this warranty. **Lithium Ion batteries and chargers are covered by a 36 month warranty** and are excluded from the warranty extension. Warranty excludes consumable parts, for example; polishing bonnets.
1. FITTING THE BONNET

**WARNING:** ENSURE THE TOOL IS SWITCHED OFF AND DISCONNECTED FROM THE POWER SUPPLY BEFORE PERFORMING ANY OF THE FOLLOWING TASKS.

Choosing the Correct Bonnet to Use

2 bonnets are included with this tool and each has its own purpose.

- The application bonnet (towelling material) should be used to apply polishing compound to the surface.
- The polishing bonnet (fleece material) is used once the polishing compound is applied and will remove the compound leaving a polished surface.

Attaching the Bonnet

1. Pull the bonnet over one side of the foam pad.

2. Pull the remaining bonnet over the foam pad.

Removing the Bonnet

1. Pull one side of the bonnet off the foam pad and then remove.
2. BATTERY & CHARGING (sold separately)

**CAUTION:** THE CHARGER FOR THIS PRODUCT SHOULD BE PROTECTED BY A RESIDUAL CURRENT DEVICE (RATED AT 30mA OR LESS).

The purchased battery will be shipped in a low charge condition, and requires charging prior to use. Allow several cycles of charging and discharging (through use of the tool) for the battery to reach its optimum performance / runtime.

**Charging your lithium ion battery - Fast Charger**

1. Connect the charger into a mains power outlet.

2. The charger LED will flash green showing power is being supplied to the charger.

3. With the charger sitting on a flat surface, align the raised ribs on the battery with the recess in the charger and slide onto the charger ensuring a firm connection.

4. The charger LED will illuminate red signifying that the battery is charging.

5. The charger LED will illuminate green once the battery is fully charged.

**Charger LED Indicator**

<table>
<thead>

</tr>
</tbody>
</table>

**Battery Charge Indicator**

The purchased battery is equipped with a battery charge indicator to show the state of the battery charge. Press the charge indicator button and look to see which LED lights.

- Battery requires immediate charging
- Low state of charge, requires charging soon.
- Mid state of charge
- Full state of charge.

**Note:** The battery needs to be removed from the tool to check the state of charge.

**Charging your lithium ion battery - Eco Charger**

1. Connect the charger into a mains power outlet.

2. The charger LED will flash green showing power is being supplied to the charger.

3. With the battery sitting on a flat surface, align the raised ribs on the battery with the recess in the charger and slide onto the battery ensuring a firm connection.

4. The charger LED will illuminate red signifying that the battery is charging.

5. When removing the charger from the battery, first press the battery release tab, then slide the charger from its position.

**Charging your lithium ion battery - Fast Charger**

2. Connect the charger into a mains power outlet.

4. The charger LED will illuminate red signifying that the battery is charging.

3. With the charger sitting on a flat surface, align the raised ribs on the battery with the recess in the charger and slide onto the charger ensuring a firm connection.

5. The charger LED will illuminate green once the battery is fully charged.

**Battery Charge Indicator**

The purchased battery is equipped with a battery charge indicator to show the state of the battery charge. Press the charge indicator button and look to see which LED lights.

- Battery requires immediate charging
- Low state of charge, requires charging soon.
- Mid state of charge
- Full state of charge.

**Note:** The battery needs to be removed from the tool to check the state of charge.
4. USING THE BUFFER POLISHER

**WARNING:** ENSURE HANDS ARE KEPT CLEAR OF MOVING PARTS DURING OPERATION TO AVOID INJURY. THE POLISHING PAD SPINS AT HIGH SPEEDS.

**Before Polishing**

Test a small inconspicuous area of the surface. Refer to polish manufacturer’s instructions regarding application and drying times.

Using too much polish may:
- Reduce the life of the foam pad
- Make polishing difficult and take longer
- Cause bonnet to come off

**Note:** Never use abrasive compounds.

**Application**

1. Ensure a clean application bonnet (towelling material) is fitted to the foam pad.

2. Apply a small amount of polishing compound or liquid to the application bonnet. Hold the polisher on the surface and start the tool.

3. Allow the motor to reach maximum speed and move the polisher using long sweeping strokes in a crisscross pattern.

**Note:** Do not apply excessive force to the polisher. Allow the polisher to do the work.

**Note:** Never use the polishing bonnet to apply polish to a surface.

4. Once polishing compound has been applied to the entire surface using the application bonnet, switch the tool off and remove the battery. You can now move onto the polishing process.

---

3. BATTERY & CONTROLS

**Inserting the Battery (not included)**

1. Slide the grooves of the battery into the recess at the back of the tool, until it clicks into place.

**Removing the Battery (not included)**

1. Press and hold the battery release tab.

2. Slide the battery out of the tool to remove.

**Switching On and Off**

1. To start the polisher press the on/off switch into the on position “I”.

2. To stop operation, press the on/off switch into the off position “0”.

**OPERATION**
Polishing

1. Remove the application bonnet and replace with a clean polishing bonnet.

2. Insert the battery, hold the polisher on the surface and start the tool.

3. Allow the motor to reach maximum speed and move the polisher using long sweeping strokes in a crisscross pattern.

   **Note:** Do not apply excessive force to the polisher. Allow the polisher to do the work.

4. Once the entire surface has been polished and all polishing compound is removed using the polishing bonnet, you will be left with a swirl-free polished surface.

**Operation Tips**

It is best to start with large flat surfaces and ending with the hard-to-reach areas.

Never force the polisher. The weight of the tool supplies adequate pressure, to do the work. Applying additional pressure will slow the motor, rapidly wear the bonnet, and greatly reduce the polisher speed. This will slow the polishing rate and produce an inferior quality surface.

**CAUTION:** Excessive pressure will overload the motor, causing possible damage to the polisher by overheating the motor, or damage to the surface.

**CAUTION:** DO NOT USE WITH ABRASIVE COMPOUNDS AS THIS WILL VOID THE WARRANTY.

5. **CLEANING THE BONNETS**

   The included application and polishing bonnets can be re-used. For maximum life and performance, the bonnets should be cleaned after each use.

   1. Remove the bonnets from the tool and hand wash under warm water.

   2. Allow the bonnets to air dry before fitting to the polisher.

   **Note:** If needed, the bonnets can be machine washed in cold water with a small amount of detergent.
**MAINTENANCE**

- Keep ventilation slots of the polisher clean at all times to ensure efficient operation.
- After each use, blow air through the tool housing to ensure it is free from all dust, dirt, etc. Build up of dust, dirt particles may cause the tool to overheat and shorten the life of the tool.
- If the housing of the polisher requires cleaning, do not use solvents but a moist soft cloth or soft brush only.
- Never let any liquid get inside the tool, never immerse any part of the tool into liquid.
- No lubrication is necessary as the tool has sealed bearings.
- When not in use, the polisher should be stored in a dry, frost free location not within the reach of children.
- The bonnets should be cleaned after each use to maximise the life and performance.
- Allow the foam pad to completely dry after each use.

- **WARNING!** ALWAYS ENSURE THE TOOL HAS COMPLETELY STOPPED AND THE BATTERY IS REMOVED PRIOR TO ANY MAINTENANCE.

**Battery protection system**

The tool is equipped with the battery protection system, which helps to ensure a long service life.

The output power automatically cuts off during operation when the tool and/or battery are placed under the following situations:

- **When the tool is overloaded:**
  If this occurs, release the trigger switch and remove causes of overload, then pull the switch trigger again to restart.

- **When the remaining battery capacity becomes low:**
  Recharge the battery pack.

  **Note:** The battery protection system does not in any way damage the tool.

  **Note:** The indicated capacity may be lower than the actual level during use or immediately after using the tool.

**Removing the Foam Pad**

1. Insert a long-bladed screwdriver into the hole between the foam pad and the motor housing to stop the spindle moving.

2. Using a phillips screwdriver remove the screw holding the foam pad, by turning it anti-clockwise.

3. Reinstall the foam pad by rotating the securing screw clockwise.

**TROUBLESHOOTING**

- **LED lights do not illuminate on charger**
  Check the charging adaptor is securely plugged into the wall outlet.
  Check that the battery is firmly connected to the charging cradle.

- **The battery has a short run time**
  Ensure the battery is properly charged. It will take 4-5 charging cycles before the battery reaches optimum charge and run time. On the initial charge, the battery requires 5 hours of charging. Subsequent charging only requires 3-5 hours.

- **Sparking visible through the housing air vents**
  A small amount of sparking may be visible through the housing vents. This is normal and does not indicate a problem.

- **The polisher is not removing the compound from the surface**
  Ensure a clean polishing bonnet (not the application bonnet) is fitted to the polisher.
Spare parts can be ordered from the Special Orders Desk at your local Bunnings Warehouse.
For further information, or any parts not listed here, visit www.ozito.com.au or contact Ozito Customer Service:

CARING FOR THE ENVIRONMENT

Power tools that are no longer usable should not be disposed of with household waste but in an environmentally friendly way. Please recycle where facilities exist. Check with your local council authority for recycling advice.

Recycling packaging reduces the need for landfill and raw materials. Reuse of recycled material decreases pollution in the environment. Please recycle packaging where facilities exist. Check with your local council authority for recycling advice.

BATTERY AND CHARGER SAFETY WARNINGS

THIS MANUAL CONTAINS IMPORTANT SAFETY AND OPERATING INSTRUCTIONS FOR YOUR BATTERY CHARGER.

1. Before using the charger read all instructions and cautionary markings on the charger, battery pack and the product using the battery pack.
2. This charger is not intended for any uses other than charging rechargeable batteries. Any other use may result in risk of fire, electric shock or electrocution.
3. Do not place any object on top of the charger or place the charger on a soft surface that may result in excessive internal heat. Place the charger in a position away from any heat source.
4. To reduce risk of damage to the electric plug and cord, pull by the plug rather than the cord when disconnecting the charger.
5. Make sure the cord is located so that it will not be stepped on, tripped over, or otherwise subjected to damage or stress.
6. An extension cord should not be used unless absolutely necessary. Use of an improper extension cord could result in the risk of fire, electric shock or electrocution.
7. Do not operate the charger if it has received a sharp blow, been dropped or otherwise damaged in any way. Have it checked by an electrician or power tool repairer.
8. Do not disassemble charger. Take it to an electrician or power tool repairer when service or repair is required. Incorrect reassembly may result in a risk of electric shock, electrocution or fire.
9. To reduce risk of electric shock, unplug the charger from the outlet before attempting any cleaning. Removing the battery pack will not reduce this risk.
10. Never attempt to connect 2 chargers together.
11. DO NOT store or use the tool and battery pack in locations where the temperature may reach or exceed 40ºC (such as inside sheds or metal buildings in summer).
12. The charger is designed to operate on standard household electrical power (240 volts). Do not attempt to use it on any other voltage!
13. The battery pack is not fully charged out of the carton. First read the safety instructions and then follow the charging notes and procedures.
14. The longest life and best performance can be obtained if the battery pack is charged when the air temperature is between 18 - 24ºC. Do not charge the battery pack in an air temperature below 10ºC or above 40ºC. This is important and will prevent damage to the battery pack.
15. Do not incinerate the battery pack even if it is seriously damaged or is completely worn out. The battery can explode in a fire.
16. Never attempt to open the battery pack for any reason. If the plastic housing of the battery pack breaks or cracks, immediately discontinue use and do not recharge.
17. During charging, the battery must be placed in a well ventilated area.

**ELECTRICAL SAFETY**

**WARNING!** When using mains-powered tools, basic safety precautions, including the following, should always be followed to reduce risk of fire, electric shock, personal injury and material damage.

Read the whole manual carefully and make sure you know how to switch the tool off in an emergency, before operating the tool. Save all instructions and other documents supplied with this tool for future reference.

The charger has been designed for 230V and 240V only. Always check that the power supply corresponds to the voltage on the rating plate.

Note: The supply of 230V and 240V on Oce tools are interchangeable for Australia and New Zealand.

This tools charger is double insulated therefore no earth wire is required.

**GENERAL POWER TOOL SAFETY WARNINGS**

**WARNING!** Read all safety warnings and all instructions. Failure to follow the warnings and instructions can result in electric shock, fire and/or serious injury.

Save all warnings and instructions for future reference. The term "power tool" in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

1. **Work area safety**
   - Keep work area clean and well lit. Cluttered or dark areas invite accidents.
   - Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust.

2. **Personal protective equipment**
   - Wear personal protective equipment. Depending on application, use face shield, safety goggles or safety glasses. As appropriate, wear dust mask, hearing protectors, gloves and non-skid safety shoes. Hard hat or hearing protection used for appropriate conditions will reduce personal injuries.
   - Do not use accessories which are not specifically designed and recommended by the tool manufacturer. The use of accessories not recommended by the tool manufacturer can result in a hazardous situation and cause injury beyond immediate area of operation.

3. **Power tool use and care**
   - Do not use power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while using power tools may result in serious personal injury.
   - Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while using power tools may result in serious personal injury.
   - Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the tool to be performed. Use of the power tool for operations different from those listed could result in a hazardous situation.
   - Do not use a power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
   - Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.
   - Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of unsupervised children.
   - Keep cutting tools sharp and clean. Keep cutting tools sharp and clean. Sharp tools are less likely to slip and are easier to control.
   - Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the tool to be performed. Use of the power tool for operations different from those listed could result in a hazardous situation.

4. **Battery tool use and care**
   - Recharge only with the charger specified by the manufacturer. A charger that is suitable for one type of battery pack may create a risk of fire when used with another battery pack.
   - Use battery tools only with specifically designated battery packs. Use of any other battery packs may create a risk of injury and fire.
   - When battery pack is not in use, keep it away from other metal objects, like paper clips, coins, nails, screws, or other small metal objects, that can make a connection from one terminal to another. Shorting the battery terminals together may cause burns or a fire.
   - Under abusive conditions, liquid may be ejected from the battery. Contact with this liquid may cause injury. If liquid contacts eyes, additionally seek medical help. Liquid ejected from the battery may cause irritation or burns.
   - Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.

5. **Battery tool storage**
   - Do not store power tools in the elements or where temperatures exceed 125°F (52°C). Exposure to extreme cold or heat, humid or wet locations, may cause damage, wear and ageing. Replace the extension lead if damaged or defective. When using an extension lead on a reel, always unwind the lead completely. Use of an extension lead not suitable for the power input of the tool in which it is damaged or defective may result in a risk of fire and electric shock.
   - The power supply for this products charger should be protected by a residual current device (rated at 30mA or less). A residual current device reduces the risk of electric shock.

**BUFFER POLISHER SAFETY WARNINGS**

**WARNING!** This appliance is not intended for use by young or infirm persons unless supervised by a responsible person to ensure that they can use the appliance safely.

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Children should be supervised to ensure that they do not play with the appliance.

This power tool is intended to function as a polisher. Read all safety warnings, instructions, illustrations and specifications provided with this power tool. Failure to follow all instructions listed below may result in electric shock, fire and/or serious injury.

Operations such as grinding, sanding, wire brushing, or cutting-off are not recommended to be performed with this power tool. Operations for which the power tool was not designed may create a hazard and cause personal injury.

Do not use accessories which are not specifically designed and recommended by the tool manufacturer. Just because the accessory can be attached to your power tool, it does not assure safe operation.

The motor's fan will draw the dust inside the housing and away from moving parts. Regularly clean the power tool's air vents.

If the supply cord is damaged, it must be replaced by an electrician or a power tool repairer in order to avoid a hazard.

**NOTICE:** Double insulation does not take the place of normal safety precautions when operating this tool. The insulation system is for added protection against injury resulting from a possible electrical insulation failure within the tool.

**Using an Extension Lead**

Always use an approved extension lead suitable for the power input of this tool. Before use, inspect the extension lead for signs of damage, wear and ageing. Replace the extension lead if damaged or defective.

When using an extension lead on a reel, always unwind the lead completely. Use of an extension lead not suitable for the power input of the tool in which it is damaged or defective may result in a risk of fire and electric shock.

The power supply for this products charger should be protected by a residual current device (rated at 30mA or less). A residual current device reduces the risk of electric shock.

Regularly clean the power tool’s air vents. The motor’s fan will draw the dust inside the housing and excessive accumulation of powdered metal may cause electrical hazards.

Do not operate the power tool near flammable materials. Sparks could ignite these materials.

Do not use accessories that require liquid coolants. Watering or other liquid coolants may result in electrocution or shock.

**WARNING!** Some dust created by power sanding, sawing, grinding, drilling and other construction activities contain chemicals known to cause cancer, birth defects or other reproductive harm.

Some examples of these chemicals are:
- Lead from lead-based paint.
- Crystalline silica from bricks and cement and other masonry products; and
- Arsenic and chromium from chemically treated timber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: work in a well ventilated area and work with approved safety equipment, such as dust masks that are specially designed to filter out microscopic particles.

**Kickback and Related Warnings**

Kickback is a sudden reaction to a pinched or snagged rotating wheel, backing pad, paper or any other accessory. Pinching or snagging causes rapid start of the rotating accessory which in turn causes the uncontrolled power tool to be forced in the direction opposite of the accessory's rotation at the point of the binding. Kickback is the result of power tool misuse and/or incorrect operating procedures or conditions and can be avoided by taking proper precautions as given below.

- Maintain a firm grip on the power tool and position your body and arm to allow you to resist kickback forces. Always use auxiliary handle, if provided, for maximum control over kickback or torque reaction during start up. The operator can control torque reactions or kickback forces, if proper precautions are taken.
- Never place your hand near the rotating accessory. Accessory may kickback over your hand.
- Do not position your body in the area where power tool or nozzle will move if kickback occurs. Kickback will propel the tool in direction opposite to the wheel’s movement at the point of snagging.
- Use special care when working corners, sharp edges etc. Avoid bouncing and snagging the accessory. Corners, sharp edges or bouncing have a tendency to snag the rotating accessory and cause loss of control or kickback.

**WARNING!** Some dust created by power sanding, sawing, grinding, drilling and other construction activities contain chemicals known to cause cancer, birth defects or other reproductive harm.

Some examples of these chemicals are:
- Lead from lead-based paints.
- Crystalline silica from bricks and cement and other masonry products; and
- Arsenic and chromium from chemically treated timber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: work in a well ventilated area and work with approved safety equipment, such as dust masks that are specially designed to filter out microscopic particles.
