Belt Sander

Sanding Belt

3 YEAR REPLACEMENT WARRANTY

IN ORDER TO MAKE A CLAIM UNDER THIS WARRANTY YOU MUST RETURN THE PRODUCT TO YOUR NEAREST BUNNINGS WAREHOUSE WITH YOUR BUNNINGS REGISTER RECEIPT. PRIOR TO RETURNING YOUR PRODUCT FOR WARRANTY PLEASE TELEPHONE OUR CUSTOMER SERVICE HELPLINE:

Australia 1800 069 486
New Zealand 0508 069 486

TO ENSURE A SPEEDY RESPONSE PLEASE HAVE THE MODEL NUMBER AND DATE OF PURCHASE AVAILABLE. A CUSTOMER SERVICE REPRESENTATIVE WILL TAKE YOUR CALL AND ANSWER ANY QUESTIONS YOU MAY HAVE RELATING TO THE WARRANTY POLICY OR PROCEDURE.

The benefits provided under this warranty are in addition to other rights and remedies which are available to you at law. Our goods come with guarantees that cannot be excluded at law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Generally you will be responsible for all costs associated with a claim under this warranty, however, where you have suffered any additional direct loss as a result of a defective product you may be able to claim such expenses by contacting our customer service helpline above.

3 YEAR REPLACEMENT WARRANTY

Your product is guaranteed for a period of 36 months from the original date of purchase and is intended for DIY (Do It Yourself) use only. If a product is defective it will be replaced in accordance with the terms of this warranty. Warranty excludes consumable parts, for example: sanding belt, carbon brushes etc.

WARNING

The following actions will result in the warranty being void.

• If the tool has been operated on a supply voltage other than that specified on the tool.
• If the tool shows signs of damage or defects caused by or resulting from abuse, accidents or alterations.
• Failure to perform maintenance as set out within the instruction manual.
• If the tool is disassembled or tampered with in any way.
• Professional, industrial or high frequency use.
**SETUP & PREPARATION**

### 1. DUST BAG

**WARNING!** ENSURE THE TOOL IS SWITCHED OFF AND DISCONNECTED FROM THE POWER SUPPLY BEFORE PERFORMING ANY OF THE FOLLOWING STEPS.

**Fitting the Dust Bag**

1. Slide the dust bag onto the dust ejection port until it clicks into place.

2. Ensure the dust bag is closed before starting operation.

**Emptying the Dust Bag**

1. Unzip the dust bag and empty the dust into a bin.

2. Ensure the dust bag is closed before starting operation.
2. SANDING BELT

Fitting the Sanding Belt

1. Place the sander on its left side.

2. Release the belt tension by pushing the tensioning lever all the way towards the front.

3. Place the belt over the front and rear rollers.

4. Once the belt is in the correct position, pull the tensioning lever backwards to secure the belt.

Removing the Sanding Belt

1. Release the belt tension by pushing the tensioning lever all the way towards the front.

2. Remove the belt from the rollers

3. Place the belt over the front and rear rollers.

4. Adjust the belt until its outer edge is even with the outer edge of the rear roller. Make sure that the belt does not rub against the rear guide strip.

3. BELT ADJUSTMENT

Tracking Adjustment

**WARNING** ENSURE BODY PARTS, CORDS, WORKPIECES AND ANY LOOSE ITEMS ARE CLEAR OF THE SANDING BELT BEFORE PERFORMING THE FOLLOWING STEPS.

It is necessary to ensure the belt is tracking correctly, in a straight line, to avoid the belt ‘tracking off’ the belt sander’s rollers.

1. Turn the sander upside down and hold it firmly with one hand.

2. Press the on/off trigger to start the sander and observe the tracking of the sanding belt.

3. If the belt tracks outwards, rotate the tracking knob anti-clockwise.
   If the belt tracks inward, rotate the knob clockwise.

4. Adjust the belt until its outer edge is even with the outer edge of the rear roller. Make sure that the belt does not rub against the rear guide strip.
### 4. CONTROLS

**On/Off Trigger**
1. To start the sander, squeeze the on/off trigger.
2. To stop operation, release the on/off trigger.

**Lock On Button**
The BSR-7000 is designed with a lock on button which allows you to lock the belt sander on which helps to reduce user fatigue when working for longer periods.
1. Squeeze the on/off trigger then press the lock on button.
2. Release the on/off trigger.
3. To stop operation, press and release the on/off trigger.

---

### 5. SANDING

1. If required, secure the material to be sanded so that it doesn’t slip from under the sander.

2. Firmly grip the sander and lower the rear heel of the sander onto your workpiece, with the belt off the work surface.

3. Press the on/off trigger and allow the on/off trigger to reach maximum speed.

4. Lower the sander onto the workpiece and use a back and forth motion.

**Note:** Do not apply pressure on the sander. Allow the sander to do the work.

**WARNING!** Guide the cord during sanding to prevent it being caught on the workpiece or other objects.

- Check your workpiece often. The sander is capable of removing material rapidly, especially with coarse paper.
- Do not sand on one spot for too long. The sander’s rapid action may remove too much material, creating an uneven surface.
MAINTENANCE

- Keep the ventilation vents of the sander clean at all times, if possible, prevent foreign matter from entering the vents.
- After each use, blow air through the sander housing to ensure it is free from all dust particles which may build up. Build up of dust particles may cause the sander to overheat and fail.
- If the enclosure of the sander requires cleaning, do not use solvents but a moist soft cloth only. Never let any liquid get inside the sander; never immerse any part of the sander into a liquid.

Carbon Brushes

When the carbon brushes wear out, the sander will spark and/or stop. Discontinue use as soon as this happens. They should be replaced prior to recommencing use of the sander. Carbon brushes are a wearing component of the sander therefore not covered under warranty. Continuing to use the sander when carbon brushes need to be replaced may cause permanent damage to the sander. Carbon brushes will wear out after many uses but when the carbon brushes need to be replaced, take the sander to an electrician or a power tool repairer for a quick and low cost replacement. Always replace both carbon brushes at the same time.

Note: Ozito Industries will not be responsible for any damage or injuries caused by the repair of the sander by an unauthorised person or by mishandling of the sander.

IMPORTANT:
If the motor on your belt sander operates but the belt does not rotate, follow these instructions. In most cases, it isn’t necessary to return the product back to the store. Check that the drive belt has not been damaged. If it is damaged or broken, please contact Ozito Customer Service for a new belt drive. Once you have received your new drive belt, please follow the instructions below.

1. To remove and check the drive belt, remove the two screws from the belt cover. If the belt is damaged, worn or broken, replace with a new drive belt.
2. To remove drive belt, simply use a pair of scissors to cut the drive belt.
3. To fit the new drive belt, place it around the large belt wheel. Align the ridges on the belt with the teeth on the small gear wheel.
4. Rotate the large belt wheel and push the drive belt down onto the small gear wheel. Keep rotating the wheel and feed the drive belt onto the small gear wheel until it sits flush with the edge of the wheels.
5. Refit cover and tighten screws.

Note: If intermediate sanding is required, choose a grit rating between coarse and fine. The above table is intended as a guide only. To ensure a satisfactory result, a small, inconspicuous area should first be tested to ensure the grit of sandpaper chosen is suitable for the desired finish.

TROUBLESHOOTING

- May indicate the carbon brushes have worn out and need to be replaced. Carbon brushes should only be replaced by a qualified electrician or power tool repairer.

Sandpaper Selection

Selecting the correct grit of sandpaper is an important step in achieving optimum results. Coarse grit will remove the most material. Finer grit will produce a smoother finish. The condition of the workpiece will determine the grit of the sandpaper to be used. The higher the grit number, the finer the grade of sandpaper.

If the surface is rough, start with a coarse grit and sand until the surface is uniform. Medium grit may then be used to remove scratches left by the coarser grit. Finer grit is then used to finish the surface. Always continue sanding with each grade of sandpaper until the surface is uniform.

ELECTRICAL SAFETY

WARNING! When using mains-powered tools, basic safety precautions, including the following, should always be followed to reduce risk of fire, electric shock, personal injury and material damage.

Read the whole manual carefully and make sure you know how to switch the tool off in an emergency, before operating the tool.

Save these instructions and other documents supplied with this tool for future reference. The charger has been designed for 230V and 240V only. Always check that the power supply corresponds to the voltage on the rating plate.

Note: The supply of 230V and 240V on Ozito tools are interchangeable for Australia and New Zealand.

This tool's charger is double insulated; therefore no earth wire is required.

Note: Double insulation does not take the place of normal safety precautions when operating this tool. The insulation system is for added protection against injury resulting from a possible electrical insulation failure within the tool.

GENERAL POWER TOOL SAFETY WARNINGS

WARNING! Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury. Save all warnings and instructions for future reference. The term “power tool” in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

1. Work area safety

a. Keep work area clean and well lit. Cluttered or dark areas invite accidents.

b. Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite dust or fumes.

c. Keep children and bystanders away while operating a power tool. Distractions can cause you to lose control.

2. Electrical safety

a. Power tool plugs must match the outlet. Do not use any adapter plugs with earthed (grounded) power tools. Unmodified plugs and matching outlets will reduce risk of electric shock.

b. Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators. If your body is earthed or grounded, you are likely to get an electric shock if you touch the power tool while it is plugged into an outlet.

c. Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.

d. Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. The cord may be damaged.

3. Personal safety

a. Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use a power tool while you are tired or under the influence of drugs, alcohol or medication. A moment of inattention while operating power tools may result in serious personal injury.

b. Use personal protective equipment. Always wear eye protection. Protective equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce the risk of electric shock.

c. When operating a power tool outdoors, use an extension cord suitable for outdoor use. Use of a cord suitable for outdoor use reduces the risk of electric shock.

4. Power tool use and care

a. Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack.

b. Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing the power tool. There is an increased risk of electric shock if the tool is plugged in.

c. Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in serious personal injury.

d. Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.

e. Do not use the power tool if the switch does not turn it on and off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.

e. Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing power tools. Such preventive safety measures reduce the risk of starting the power tool accidentally.

f. Store idle power tools out of the reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate the power tool. Power tools are dangerous in the hands of untrained users.

g. Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any condition that may affect the power tool’s operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.

h. Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.

i. Use the right power tool for the job. Don’t overload the power tool. Use of the right power tool for operations different from those intended could result in a hazardous situation.

j. Keep handles and grasping surfaces dry, clean and free from oil and grease. Slippery handles and grasping surfaces do not allow for safe handling and control of the tool in unexpected situations.

5. Service

a. Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.

BELT SANDER SAFETY WARNINGS

WARNING! Hold power tool by insulated gripping surfaces, because the belt may contact its own cord. Cutting a “live” wire may make exposed metal parts of the power tool “live” and could give the operator an electric shock. Recommendation that the tool always be supplied via a residual current device (RCD) with a leakage current setting of 30mA or less.

It is recommended that the extension lead is a maximum of 25m in length. Do not use multiple extension leads.

Unplug the sander before changing accessories. Accidental start-ups may occur if the sander is plugged in while changing an accessory.

Disposing of dust. Be extremely careful of dust disposal, materials in fine particle form may be explosive. Do not throw sanding dust on an open fire. Spontaneous combustion, may in time, result from a mixture of oil or water with dust particles. Always wear eye protection and a dust mask. Dusting particles can be absorbed by your eyes and inhaled easily and may cause health complications.

Use special precautions when sanding chemically pressure treated timber, paint that may be lead based, or any other materials that may contain carcinogens. A suitable breathing respirator and protective clothing must be worn by all persons entering the work area. Work should be sealed by plastic sheeting and persons not protected should be kept out until work area is thoroughly cleaned.

Do not ‘wet sand’ with this sander. Liquids entering the motor housing are an electrical shock hazard.

Keep fingers and clothing away from belt. They could get cut or wedged between the pulley, belt and motor housing.

Properly adjust the tracking of belt to avoid it overhanging the housing.

A running belt overlapping its housing can cause severe lacerations.

Keep the cord to the side away from the pulleys. The cord can be dragged into the belt housing and become entangled with the pulleys.

WARNING! Some dust created by power sanding, sawing, grinding, drilling and other construction activities contain chemicals known to cause cancer, birth defects or other reproductive harm.

Some examples of these chemicals are:
• Lead from lead-based paints;
• Crystalline silica from bricks, cement and other masonry products, and;
• Arsenic and chromium from chemically-treated timber.

Your risk from these exposures varies, depending on how often you do this type of work. To reduce your exposure to these chemicals: work in a well ventilated area and work with approved safety equipment, such as dust masks that are specially designed to filter out microscopic particles.
