PRODUCT BOOKLET

easycraft

stylish solutions for walls and ceilings

why choose easycraft

EASY TO INSTALL - either do it yourself or rest easy that just one tradesman can install your easycraft wall or ceiling feature from start to finish, utilising the easyjoin system, ensuring a strong, professional finish.

EASY ON THE EYE - in both contemporary and traditional design applications, easycraft looks superb, providing just enough profile to enhance any room.

EASY TO FINISH - easycraft MDF panels come fully pre-primed ready for the final coat application and you can use either water or oil based paint.

AUSTRALIAN OWNED AND MADE - using eco approved products sourced only from plantation timbers here in Australia.
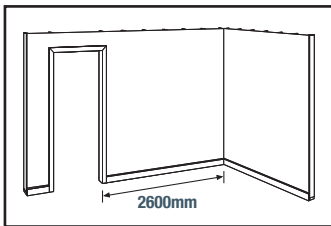

TOUGH AND IMPACT RESISTANT - made from a (MR) moisture resistant (MDF) medium density fibre board, it's ideal for those rooms that need to meet the day to day adventures of the whole family. Also great for garage and storage area walls, making hanging things easy.

NEW WALL BUILDING OR RENOVATING APPLICATIONS - easy to install over an existing wall or direct to frame for new building projects.

4 easy steps to bring your walls to life

DIY dado wall room makeover

1 CALCULATE WHAT YOU NEED

2600mm

2 POSITION THE PANELS

Centreline

A

10mm Gap

3 APPLY THE ADHESIVE AND FIT

4 ADD SKIRTING AND TRIMS

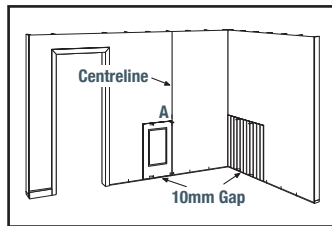

Panels

Architrave   Skirting

To work out how many panels you need, simply measure the wall width, divide it by the panel width then round it up. For a single panel of 1200mm wide and a 2600mm wall, you'll need 3 panels.

The panel widths vary.

VJ and Regency profile are 900mm high x 1200mm wide

Ascot is 900mm high x 600mm wide.

The profile of the panel determines where to begin positioning. For Ascot panels (square profile) position from the centre. For an even number of panels, start with the first panel adjacent to the centreline (position **A**).

For an odd number, place the centre of the first panel on the centreline. For all other profiles you can start in the corner and work your way out to the final edge and cut to suit. Near corners, doorways or windows, measure the gap and cut panels to fit.

Simply run a flexible adhesive down the walls allowing a 10mm gap from the floor to the base of the panel.

Attach the panels using the easy joining system and use nails top and bottom to hold it secure until the adhesive cures.
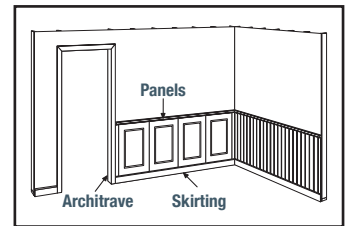

When all the panels are fitted, reattach the skirting boards, add architraves and dado rails as required. You can now finish with your final coat of paint, and sit back and admire your brand new room.

easyvj

easyvj provides a modern v-groove design to match the style of traditional timber joint planks. Works well as a subtle, yet effective wall and ceiling lining to enhance any space.

Suitable for:

- Decorative interior wall & ceiling linings
- Ideal replacement for traditional plasterboard
- Residential applications: Dining, kitchen, lounge, family, bedroom, study, media, games
- Commercial applications: Foyers, classrooms, offices, rental properties, retail, restaurants, apartments, hotels, aged care facilities

Product features:

- Made in Australia using all Australian grown species
- Consistent board surface, no knot holes, splitting or splinters
- Features decorative profile to product face
- Hidden tongue & groove *easyjoin* system

Comparison to traditional plasterboard:

- No joint sealing or sanding required
- Comes pre-primed for faster, easier final coating
- The *easyjoin* system makes installation 50% quicker
- Provides high impact resistance, 300% tougher

Environmental commitment:

- Easycraft Australia is committed to using the best available environmentally sustainable timber
- Manufacturing under AS 4707:2014 – Chain of Custody compliant management system for certified wood and forest products
- Base substrate has received Ecospecifier Global GreenTag dual certification

EJ Easyjoin system included.

easyscreen - mini

Easycraft's **easyscreen** is ideal for use in commercial and residential applications. The Mini range is great for smaller feature partitioning, or used as a unique wall art décor. Available in a range of designs to suit any style.
easyscreen - mini profiles

Halo Mini

Nature Mini

Retro Mini

Studio Mini

Easyscreen - Mini range suitable for:

- Unique look to finish off a feature wall or entrance area
- Creating a strong visual impact through the use of multiple panels, both vertically and horizontally
- Smaller feature partitioning or simply used as wall art décor

Ordering and installation:

- All products are MADE TO ORDER and cannot be returned
- All screens come with a primer coat to both sides ready for final coat finish

- Board sizes are nominal and can vary (slightly) in width and length
- Any framing used for mounting purposes must be straight and true
- If hanging screens ensure your support structure is sufficient to handle the total combined screen weight
- Screens are heavy so please ensure you have sufficient people and/or equipment available when installing
- No installation fittings or hanging accessories are provided with screens. To be purchased separately
- Images shown are representative only, top and bottom border will be larger on actual sheet, allowing for trimming

Easyscreen Type	Thickness	Length	Width	Product Codes	Weight	Application	Features

general product & installation

General Product Information

- Product should be delivered to site 3 to 5 days prior to installation and stored in the environment of where it is to be installed to allow it to acclimatise.

- The framing must be straight and true.

- For wall and/or ceiling applications studs should be spaced at 450mm centres or less.

- Fixings should be positioned no closer than 25mm to a corner and no closer than 15mm to the edge. This positioning will prevent splintering and breakout.

- A 10mm gap must be left at the floor if the wall lining is being installed only part way up the wall.

- A 10mm gap must be left at the floor as well as the top of the sheet if the wall lining is being installed from floor to ceiling.

- A 0.5mm expansion gap should be allowed at each join. Do not 'Hard Knock' the panels together.

- For each metre width of wall or ceiling, allow approx. 1.5mm for an expansion gap at the outer perimeters of your wall or ceiling. (e.g. 6m wall x 1.5mm = 9mm therefore leave a 4.5mm gap at each outer edge of wall or ceiling)

- Easycraft wall linings can be joined off the studs but these joins must be supported by additional noggins at 700mm maximum spacing.

- Decide how you wish to finish off internal and external corners before you install the first sheet.

- Where an internal wall lining is backing onto an external wall the back surface of the wall lining should also be undercoated with a paint primer.

- When installed as a ceiling lining the back of the sheet should be undercoated prior to installation. We recommend for ceiling applications that you DO NOT end butt sheets due to the potential for ongoing movement. MDF is a timber based product and will have some movement based on climatic conditions.

These are recommendations only. Always consult with a local Registered Builder experienced in the use of these types of products and to ensure you comply with all relevant building regulations.

MDF MR Material

- As with solid wood, MDF is a hygroscopic material (meaning it readily takes up and retains moisture), thus its moisture content depends on the relative humidity and air temperature in the surrounding environment. As the moisture content of MDF changes, it is subject to dimensional changes.

- There are many variables which can ultimately affect the performance of timber, including the surrounding environment, quality of installation and quality of framing. But managing changes in the environment humidity levels and moisture content plays a very important role in achieving the best results from the product. In environments that can experience large changes in air temperature and humidity you may experience movement in the panels, either expansion or shrinkage.

- Never store material outdoors or in an open area (verandah) or areas with newly poured concrete or in rooms that have been recently plastered. Always try to store the board in the area that they are to be used on gluts lifted up off the floor and let acclimatise.

  Easycraft take no responsibility for any movement of product due to the many variables that are not under our control once the product has left our premises. Such as, transport, storage, framing, installation and paint material.

general product & installation

Tools and Equipment Required

- Tape Measure
- Hand Saw or Power Saw
- Hammer / Nail Gun or Screw Gun
- Pencil
- Spirit Level
- String Line
- Caulking Cartridge Gun or Spatula
- P1 or P2 Dust Mask
- Safety Glasses (complying with AS1337)

Easycraft Wall Linings can be easily cut with a Power Saw or Hand Saw. When using a Power Saw, cut the board with the face side down. When using a Hand Saw, cut the board with the face side up.

Consumables

The following is a list of products that are suggested will perform in typical product applications.

- **Nails**

    Must be long enough to penetrate the studs at least 30mm.

    Fixing wall linings:

    - Hammer – use 2mm x 40mm anti-rust bullet head nail
    - Nail Gun – use Paslode ND Brads 14ga x 45mm

    Fixing ceiling linings:

    - Nail Gun – use Paslode Duo-Fast C2.5 x 45 Ring Shank

    If installing with power tools ensure the driving pressure is only sufficient to drive the head marginally below the surface. If the driving pressure is too high and the nail is driven in too far, splitting of the board could occur and tool marks will show.

- **Screws**

    Fixing into timber frame:

    ICCONS: Needle point CSK head
    (part No. TP796)
    - 8 -15 x 20 or 30mm

    ICCONS: Collated
    - Needle point CSK head collated (IC Find # 796C or 798C)
    - 8 -15 x 20 or 30mm

    Fixing into steel frame:

    ICCONS: Self-Drilling CSK head Self embed head (part No. TP326)
    - 8 -18 x 20 or 30mm

    ICCONS: Collated
    - Self-Drilling CSK head Self embed head collated (IC Find # 344C or 346C)
    - 8 -15 x 20 or 30mm

- **Glues**

    A flexible construction adhesive or stud adhesive should be used for fixing the sheets to the studs and noggins.

- **Miscellaneous**

    - Spacers – use off cuts of the 9mm MDF or 10mm timber pieces.
    - PVA adhesive for glueing corners together and mouldings in place.
    - Best to use a Timber based filler to fill nail or screw holes.

Technical information and suggestions for use and application have been collated within the Easycraft web site. Please refer to our "How to Guides" for information and suggestions for:

Safety

- Easycraft products are manufactured from wood products. Accordingly, machine tools should be fitted with dust extractors and operators should wear a dust mask and eye protection. Further information is contained in the respective product Material safety Data Sheets (MSDS) available on our web site.
