IN ORDER TO MAKE A CLAIM UNDER THIS WARRANTY YOU MUST RETURN THE PRODUCT TO YOUR NEAREST BUNNINGS WAREHOUSE WITH YOUR BUNNINGS REGISTER RECEIPT. PRIOR TO RETURNING YOUR PRODUCT FOR WARRANTY PLEASE TELEPHONE OUR CUSTOMER SERVICE HELPLINE:

Australia 1800 069 486
New Zealand 0508 069 486

TO ENSURE A SPEEDY RESPONSE PLEASE HAVE THE MODEL NUMBER AND DATE OF PURCHASE AVAILABLE. A CUSTOMER SERVICE REPRESENTATIVE WILL TAKE YOUR CALL AND ANSWER ANY QUESTIONS YOU MAY HAVE RELATING TO THE WARRANTY POLICY OR PROCEDURE.

The benefits provided under this warranty are in addition to other rights and remedies which are available to you at law. Our goods come with guarantees that cannot be excluded at law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Generally you will be responsible for all costs associated with a claim under this warranty, however, where you have suffered any additional direct loss as a result of a defective product you may be able to claim such expenses by contacting our customer service helpline above.

3 YEAR REPLACEMENT WARRANTY
Your product is guaranteed for a period of 36 months from the original date of purchase. If a product is defective it will be replaced in accordance with the terms of this warranty. Warranty excludes consumable parts, for example: carbon brushes, dust bags, backing pads and sanding sheets.

WARNING
The following actions will result in the warranty being void:

• If the tool has been operated on a supply voltage other than that specified on the tool.
• If the tool shows signs of damage or defects caused by or resulting from abuse, accidents or alterations.
• Failure to perform maintenance as set out within the instruction manual.
• If the tool is disassembled or tampered with in any way.
**KNOW YOUR PRODUCT**

**MULTI SANDER**

1. Variable Speed Dial
2. Hook & Loop Sanding Pad
3. On/Off Switch
4. Sure Grip Handle
5. Dust Canister

**ACCESSORIES**

6. Random Orbital Sanding Base
7. Random Orbital Sanding Paper x 1 (120Grit)
8. Sheet Sanding Base
9. Sheet Sanding Paper x 1 (120Grit)
10. Detail Sanding Base
11. Detail Sanding Paper x 1 (80Grit)

**SETUP & PREPARATION**

**1. CHANGING SANDING BASES**

**WARNING:** ENSURE THE TOOL IS DISCONNECTED FROM THE POWER SUPPLY BEFORE PERFORMING ANY OF THE FOLLOWING OPERATIONS...

The Multi Sander comes with 3 sanding bases that can be fitted to the tool, including:
- Circular random orbital sanding base (125mm)
- Triangular detail sanding base (145x100mm)
- Rectangular 1/3 sheet sanding base (183x91mm)

**Removing Sanding Bases**

**Note:** Before removing or fitting the sanding bases, any sandpaper must be removed so that you can access the mounting screws.

1. Remove the 4 screws from the base of the sanding pad by rotating anti-clockwise.

2. Pull the sanding base and aligning pins away from the tool to remove.

**Note:** The base aligning pins can sometimes get stuck in the base of the tool.

**Fitting Sanding Bases**

1. Place the sanding base onto the tool, aligning the mounting holes and the aligning pins.

**Note:** The circular sanding base does not require aligning pins.

2. Tighten the 4 screws into the base of the sanding pad with a screwdriver to secure in place.

**WARNING:** ENSURE THAT THE SCREWS ARE NOT TIGHTENED WITH EXCESSIVE FORCE. DO NOT USE A POWER DRILL FOR THIS OPERATION.
2. FITTING SANDING PAPER

Hook and Loop Paper Fitment
1. Align the holes on the sanding sheet with the holes on the sanding pad and then press onto the pad.

2. Replace the sanding sheet when it is worn.

3. Replace hook & loop backing pad when worn (see maintenance section).

1/3 Sheet Sanding Clamp System
The rectangular sheet sanding pad also features a clamping system to allow for fitting 1/3 sheet sanding paper that does not have hook and loop fitment.

1. Unhook one of the clamp springs and insert the front of the sand paper, ensuring the holes in the paper align with the holes in the pad.

2. Lock the clamp spring and repeat for the 2nd spring, ensuring the paper is pulled tightly.

2. DUST CANISTER

Installing
1. Ensure that the lid is pressed tightly onto the container.
   Note: You should hear a click once fitted correctly.

2. Push the dust canister hard onto the dust extraction port.
   Note: You should hear a click once fitted correctly.

Emptying
1. Empty dust canister when it becomes 1/3 full for optimum dust extraction.

2. Position over a bin and press the release tab at the top of the lid. Then pull the dust canister away from the extraction port.

3. To empty, lift the lid of the dust canister over a bin and then empty.
   Note: Ensure the lid is secured tightly back onto the container after emptying.

4. Push the dust canister hard onto the dust extraction port until it clicks into place.
3. CONTROLS

On/Off Switch

1. To switch the tool on, press the on/off switch forward into the on position.

2. To stop the tool on, press the on/off switch backward into the off position.

Variable Speed Dial

1. To increase the speed of the tool, rotate the variable speed dial to a higher number.

2. To decrease the speed of the tool, rotate the variable speed dial to a lower number.

4. SANDING

1. Secure the material to be sanded.

2. Firmly grasp the sander and turn the sander on.

3. Let the motor build up to maximum speed. Gradually lower it onto the workpiece with a slight forward movement.

4. For optimum results, use either of these strokes.

   - Backward/Forward
   - Side to Side

5. Upon completion of the sanding operation, remove the sander from the workpiece and then turn off the sander.
**MAINTENANCE**

- Keep the ventilation vents of the sander clean at all times, if possible, prevent foreign matter from entering the vents.
- After each use, blow air through the sander housing to ensure it is free from all dust particles which may build up. Build up of dust particles may cause the drill to overheat and fail.
- If the enclosure of the tool requires cleaning, do not use solvents but a moist soft cloth only. Never let any liquid get inside the tool; never immerse any part of the tool into a liquid.

**Replacing the Hook & Loop Backing Pad**

After considerable use, the hook and loop backing pad surface will become worn, and must be replaced when it no longer offers a firm grip. The replacement backing pad can be ordered through the Special Orders Desk at any Bunnings store.

1. To replace, remove the four philips head screws by rotating anti-clockwise.
2. Place new backing pad on the tool and retighten the four philips head screws by rotating clockwise.

*Note: Ozito Industries will not be responsible for any damage or injuries caused by the repair of the tool by an unauthorised person or by mishandling of the tool.*

**CARING FOR THE ENVIRONMENT**

Power tools that are no longer usable should not be disposed of with household waste but in an environmentally friendly way. Please recycle where facilities exist. Check with your local council authority for recycling advice.

Recycling packaging reduces the need for landfill and raw materials. Reuse of recycled material decreases pollution in the environment. Please recycle packaging where facilities exist. Check with your local council authority for recycling advice.

**TROUBLE SHOOTING**

- **Sparking visible through the housing air vents**
  A small amount of sparking may be visible through the housing vents. This is normal and does not indicate a problem.

- **Excessive sparking visible through the housing air vents and/or the drill failing to operate**
  May indicate the carbon brushes have worn out and need to be replaced. Carbon brushes should only be replaced by a qualified electrician or power tool repairer.

- **Sanding bases are not aligning correctly**
  The mounting plate at the base of the tool may need to be rotated slightly so that the holes align correctly. Ensure there are no aligning pins stuck into the base of the tool. For the triangular and rectangular sanding bases, also check that there are 4 aligning pins positioned correctly in the top of the sanding pad.

- **Sandpaper Selection**
  Selecting the correct grit of sandpaper is an important step in achieving optimum results. Coarse grit will remove the most material. Finer grit will produce a smoother finish. The condition of the workpiece will determine the grit of the sandpaper to be used. The higher the grit number, the finer the grade of sandpaper.
  - If the surface is rough, start with a coarse grit and sand until the surface is uniform. Medium grit may then be used to remove scratches left by the coarser grit. Finer grit is then used to finish the surface. Always continue sanding with each grade of sandpaper until the surface is uniform.

*Note:* If intermediate sanding is required, choose a grit rating between coarse and fine. The above table is intended as a guide only. To ensure a satisfactory result, a small, inconspicuous area should first be tested to ensure the grit of sandpaper chosen is suitable for the desired finish.

- **Sanding Tips**
  Never force the sander. The weight of the sander supplies adequate pressure, allowing the sandpaper to do the work. Applying additional pressure will slow the motor, rapidly wear the sandpaper, and greatly reduce the sander speed. This will slow the removal rate and produce an inferior quality surface.
  
  **CAUTION:** Excessive pressure will overload the motor, causing possible damage to the sander by overheating the motor, or damage to the workpiece.
  Be sure to check your workpiece often. The sander is capable of removing material rapidly, especially with coarse paper.
  The orbital action of your sander allows you to sand with the grain, or at any angle across it for most sanding jobs. In the final stages a better finish will be achieved by sanding with the grain. Do not sand on one spot for too long. The sander’s rapid action may remove too much material, creating an uneven surface.

**SPARE PARTS**

Spare parts can be ordered from the Special Orders Desk at your local Bunnings Warehouse.

For further information, or any parts not listed here, visit www.ozito.com.au or contact Ozito Customer Service:

### ELECTRICAL SAFETY

**WARNING!** When using mains-powered tools, basic safety precautions, including the following, should always be followed to reduce risk of fire, electric shock, personal injury and material damage.

Read the whole manual carefully and make sure you know how to switch the tool off in an emergency, before operating the tool.

Save these instructions and other documents supplied with this tool for future reference.

- **The electric motor has been designed for 230V and 240V only. Always check that the power supply corresponds to the voltage on the rating plate.**

- **This tool is double insulated therefore no earth wire is required.**

### GENERAL POWER TOOL SAFETY WARNINGS

**WARNING!** Read all safety warnings and all instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

- **Save all warnings and instructions for future reference.** The term ‘power tool’ in the warnings refers to your mains-operated (corded) power tool or battery-operated (cordless) power tool.

1. **Work area safety**
   - a. **Keep work area clean and well lit.** Cluttered or dark areas invite accidents.
   - b. **Do not operate power tools in explosive atmospheres,** such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
   - c. **Keep children and bystanders away while operating a power tool.** Distractions can cause you to lose control.

2. **Personal safety**
   - a. **Power tool plugs must match the outlet.** Never modify the plug in any way. Do not use a power tool with a damaged plug.
   - b. **Avoid body contact with earthed or grounded surfaces,** such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
   - c. **Do not expose power tools to rain or wet conditions.** Water entering a power tool will increase the risk of electric shock.
   - d. **Do not abuse the cord.** Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.
   - e. **When operating a power tool outdoors, use an extension cord suitable for outdoor use.** Use of a cord suitable for indoor use reduces the risk of electric shock.
   - f. **Personal protective equipment.** Always wear eye protection. Protective equipment such as dust mask, non-skid safety shoes, hard hat, or hearing protection used for appropriate conditions will reduce personal injury.

3. **Operate the tool in the off-position before connecting to power source or power tool or battery pack.** Connecting to the power tool or battery pack will increase the risk of electric shock.

4. **Do not abuse the cord.** Never use a power tool with a damaged plug.

5. **Do not overreach.** Keep proper footing and balance at all times.

6. **Dress properly.** Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in moving parts.

7. **Keep handles and grasping surfaces dry, clean and free from oil and grease.** Slippery handles and grasping surfaces do not allow for safe handling and control of the tool in unexpected situations.

8. **Keep cutting tools sharp and clean.** Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.

9. **Some dust created by power sanding, sawing, grinding, drilling and other construction activities contain chemicals known to cause cancer, birth defects or other reproductive harm.**

- **Some examples of these chemicals are:**
  - a. **Lead from lead-based paints;**
  - b. **Crystalline silica from bricks and cement and other masonry products, and;**
  - c. **Arsenic and chromium from chemically-treated timber.**

- **Your risk from these exposures varies, depending on how often you do this type of work.** To reduce your exposure to these chemicals: work in a well ventilated area and work with approved safety equipment, such as dust masks that are specially designed to filter out microscopic particles.
