Identify . Fix . Control

Weeds

Identify

Capeweed

Blackberry

Oxalis

Thistle

Dandelion

Flatweed

Moss

Algae

Weeds reduce available moisture, nutrients, sunlight and growing space needed by plants, hence stunting crop growth, quality and yield. They are hard to control because they grow rapidly, produce vast numbers of seeds, and spread aggressively.

Fix

Ideally a weedkiller that can kill weeds from the roots will prove a more effective treatment. Beat-A-Weed Natural Weedkiller will dehydrate weeds from the roots up with no chance of regrowth. It has great benefits:

- it is natural - won't harm your environment
- it is fast-acting and will show results within hours - with the weed wilting and browning

Spray to ensure complete coverage of unwanted plants to the point of run-off. Optimal results are achieved when it is applied in full sun to small, actively growing plants.

Control

Examine your garden weekly to detect problems early. Also keep your garden healthy (add organics to your soil and feed plants / water / mulch regularly) so that it can more easily defend itself against weed attacks.
