(If the unit alarms, the ight will blink rapidly, and the horn will repeatedly sound 3 beeps, pause, 3 beeps.) Once the Smoke Alarm is on the bracket, you can rotate the Alarm to adjust the alignment.

To permanently remove the locking pin, insert a flathead screwdriver the locking pin and the lock and pry the pin out of the lock.

nne optional locking feature is designed to prevent unauthorized removal of the alarm. It is not necessary to activate the lock in single-family households where unauthorized alarm removal is not a concern. Tools you will need: Needle-nose pliers or utility knife · Standard flathead screwdriver

TO LOCK THE MOUNTING BRACKET

Using needle-nose pliers, detach the pin from the mounting bracke 2. Insert the locking pin through the hole on the back of

TO UNLOCK THE MOUNTING BRACKET

IMPORTANT!

Insert a flathead screwdriver in between the mounting bracket and the locking pin.

Pry the alarm away from the bracket by pushing up the screwdriver and turning the alarm counterclockwise (left) at the same time. **WEEKLY TESTING**

AWARNING!

NEVER use an open flame of any kind to test this unit. You might accidentally damage or set fire to the unit or to your home. If the Alarm ever fails to test properly, replace it immediately. Products under warranty may be returned to the manufacturer for replacement. See "Limited Warranty" for details.

DO NOT stand close to the Alarm when the horn is sounding. Exposure at close range may be harmful to your hearing. When testing, step away when horn starts sounding

It is important to test this unit every week to make sure it is working properly. Using the Test/Silence button is the recommended way to test this Smoke Alarm. Press and hold the Test/Silence button on the cover of the unit until the alarm sounds (the unit may continue to alarm for a few seconds after you release the button, If it does not alarm, make sure the unit is receiving power and test it again, If it still does not alarm, replace it immediately. During testing you will hear a loud, repeating horn pattern: 3 beeps, pause, 3 beeps, pause. Red LED flashes rapidly.

REGULAR MAINTENANCE is unit has been designed to be as maintenance free as possible, but there are a few simple things you must do to keep it working properly

 Test it at least once a week. Clean the Smoke Alarm at least once a month; gently vacuum off any dust using your household vacuum's soft brush attachment, and test the Smoke Alarm after cleaning. Never use water, cleaners or solvents since they may damage the unit.

If the Smoke Alarm becomes contaminated by excessive dirt, dust and/or grime, and cannot be cleaned to avoid unwanted alarms, replace the unit immediately.

Relocate the unit if it sounds frequent unwanted alarms. See "Locations to Avoid For Smoke Alarms" for details. When the battery becomes weak, the Smoke Alarm unit will "chirp" approximately once a minute (the Low Battery warning). This low battery warning should last for up to 30 days, but you should replace the Smoke Alarm immediately to continue your protection.

IMPORTANT!

Actual service life depends on the Smoke Alarm and the environment in which it is installed. You MUST replace the Smoke Alarm immediately once the unit starts "chirping" (the "low battery warning").

OPTIONAL LOCKING FEATURE

emoval of the alarm. It is not necessa o activate the lock in single-family households where unauthorized alarm Tools you will need: Needle-nose pliers or utility knife . Standard flathead screwdriver

Using needle-nose pliers, detach the pin from the mounting bracket 2. Insert the locking pin through the hole on the back of

TO LOCK THE MOUNTING BRACKET

DO NOT stand close to the Alarm when the horn is sounding. Exposure at close range may be harmful to your hearing. When testing, step away when horn starts sounding

WEEKLY TESTING AWARNING!

NEVER use an open flame of any kind to test this unit. You might accidentally damage or set fire to the unit or to your home. If the Alarm ever fails to test properly, replace it immediately. Products under warranty may be returned to the manufacturer for replacement. See "Limited Warranty" for details.

It is important to test this unit every week to make sure it is working properly. Using the Test/Silence button is the recommended way to test this Smoke Alarm. Press and hold the Test/Silence button on the cover of the unit until the alarm sounds (the unit may continue to alarm for a few seconds after your clease the button), if does not alarm, make sure the unit is receiving power and test it again. If it still does not alarm, replace it immediately. During testing you will hear a loud, repeating horn pattern: 3 beeps, pause, 3 beeps, pause. Red LED flashes rapidly.

Relocate the unit if it sounds frequent unwanted alarms. See "Locations to Avoid For Smoke Alarms" for details.

When the battery becomes weak, the Smoke Alarm unit will "chirp" approximately once a minute (the Low Battery warning). This low battery warning should last for up to 30 days, but you should replace the Smoke Alarm immediately to continue your protection.

REGULAR MAINTENANCE

s unit has been designed to be as maintenance free as possible, but there are a few simple things you must do to keep it working properly Test it at least once a week. Clean the Smoke Alarm at least once a month; gently vacuum off any dust using your household vacuum's soft brush attachment, and test the Smoke Alarm after cleaning. Never use water, cleaners or solvents since they may damage the unit.

If the Smoke Alarm becomes contaminated by excessive dirt, dust and/or grime, and cannot be cleaned to avoid unwanted alarms, replace the unit immediately.

IMPORTANT!

OPTIONAL LOCKING FEATURE removal of the alarm. It is not necessa he optional locking feature is designed to prevent unauthorized removal o activate the lock in single-family households where unauthorized alarm Tools you will need: Needle-nose pliers or utility knife . Standard flathead screwdriver

Actual service life depends on the Smoke Alarm and the environment in which it is installed. You MUST replace the Smoke Alarm immediately once the unit starts "chirping" (the "low battery warning").

When you attach the alarm to the mounting bracket the locking pin's head will fit into a notch on the bracket.

IMPORTANT!

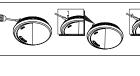

nsert a flathead screwdriver in betwe nounting bracket and the locking pin. Pry the alarm away from the bracket by pushing up the screw and turning the alarm counterclockwise (left) at the same tim

RECOMMENDED LOCATIONS FOR SMOKE ALARMS

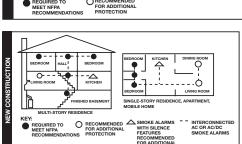

On every level of your home, including finished attics and basements.

Inside every bedroom, especially if people sleep with doors closed.

Installing Smoke Alarms in Single-Family Residences The National Fire Protection Association (NFPA), recommends one Smoke Alarm on every floor, in every sleeping area, and in every bedroom. In new construction, the Smoke Alarms must be AC powered and interconnected. See "Agency Placement Recommendating of etails. For additional coverage, it is recommended that you install a Smoke Alarm in all rooms, halls, solrage areas, finished, and basements, where temperatures normally remain between 40° F (4.4° C) and 100° F (37.8° C). Make sure no door or other obstruction could keep smoke from reaching the Smoke A

• In the hall near every sleeping area. If your home has multiple sleeping areas, install a unit in each. If a hall is over 40 feet (12 meters) long, install an Alarm at each end.

IMPORTANT!

ırm installation vary from state to state and from region to region. Check with your local Fire Department a. It is recommended AC or AC/DC units be interconnected for added protection.

AGENCY PLACEMENT RECOMMENDATIONS NFPA 72 CHAPTER 29 "FOR YOUR INFORMATION, THE NATIONAL FIRE ALARM AND SIGNALING CODE, NFPA 72, READS AS FOLLOWS:"
29.5.1* Required Detection. 29.5.1.1* Where required by other governing laws, codes, or standards for a specific type of occupancy, approved single and multiple-station smoke alarms shall be installed as follows:

- (2) *Outside of each separate dwelling unit sleeping area, within 21 ft (6.4 m) of any door to a sleeping room, with the distance measured along a path of travel
- (1) *In all sleeping rooms and guest rooms
- (3) On every level of a dwelling unit, including basements 4) On every level of a residential board and care occupancy (small facility), including basements and excluding crawl spaces and unfinished attics
- (5) *In the living area(s) of a guest suite (6) In the living area(s) of a residential board and care occupancy (small facility)
- (Reprinted with permission from NFPA 72°, National Fire Alarm and Signaling Code Copyright © 2010 National Fire Protection Association, Quincy, MA 02269. This reprinted material is not the complete and official position of the National Fire Protection Association, on the referenced subject which is represented only by the standard in its entirety), (National Fire Alarm and Signaling Code® and NFPA 72° are registered trademarks of the National Fire Protection Association, Inc., Quincy, MA 02269).

Early warning detection is best achieved by the installation of fire detection equipment in all rooms and areas of the household as follows: A Smoke Alarm installed in each separate sleeping area (in the vicinity, but outside bedrooms), either all Alera in Smoke Alarms in the living rooms, debedrooms, kilchens, hallways, finished attics, furnace rooms, closets, utility and storage rooms, besements, and attached garages.

LOCATIONS TO AVOID FOR SMOKE ALARMS

- FOR BEST PERFORMANCE, IT IS RECOMMENDED YOU AVOID INSTALLING SMOKE ALARMS IN THESE AREAS:

 Where combustion particles are produced. Combustion particles form when something burns. Areas to avoid include poorly ventilated kitchens, garages, and furnace rooms. Kee put instal teast 20 elect (Emeter) from the sources of combustion particles (store, furnace, water heater, space heater) if possible. In areas where a 20-foot (6-meter) distance is not possible in modular, mobile, or smaller homes, for example its recommended the Smoke Alarm be placed as far from these fuel-burning sources as possible. The placement recommendations are intended to keep these Alarms at a reasonable distance from a fuel-burning source, and thus reduce "unwanted" alarms. Unwanted alarms can occur if a Smoke Alarm be placed directly next to a fuel-burning source. Ventilate these areas as much as possible.

 In air streams near kitchens. Air currents can draw cooking smoke into the sensing chamber of a Smoke Alarm ment recommendations are unable processed to the sensing chamber of a Smoke Alarm ment recommendation. It is recommendation to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment recommendation are unable processed to the sensing chamber of a Smoke Alarm ment are unable processed to the sensing chamber of a Smoke Alarm ment and the sensing chamber of a Smoke Alarm ment are unable processed to the sensin
- . In very damp, humid or steamy areas, or directly near bathrooms with showers. Keep units at least 10 feet (3 meters) away from showers, saunas, dishwashers, etc.
- Where the temperatures are regularly below 40° F (4.4° C) or above 100° F (37.8° C), including unheated buildings, outdoor rooms, porches, or unfinished attics or basements.
- . In very dusty, dirty, or greasy areas. Do not install a Smoke Alarm directly over the stove or range. Keep laundry room Smoke Alarms free of dust or lint.
- Near fresh air vents, ceiling fans, or in very drafty areas. Drafts can blow smoke away from the unit, preventing it from reaching the se In insect infested areas. Insects can clog openings to the sensing chamber and cause unwanted alarms.
- Less than 12 inches (305mm) away from fluorescent lights. Electrical "noise" can interfere with the sensor. In "dead air" spaces. "Dead air" spaces may prevent smoke from reaching the Smoke Alarm.

AVOIDING DEAD AIR SPACES
"Dead air" spaces may prevent smoke from reaching the Smoke Alarm. To avoid dead air spaces, follow the installation recommendations below.

On ceilings, install Smoke Alarms as close to the center of the ceiling as possible, if this is not possible, install the Smoke Alarm at least 4 inches (102 mm) from the wall or corner. For wall mounting (if allowed by building codes), the top edge of Smoke Alarms should be placed between 4 and 12 inches (102 and 305 mm) from the wall/ceiling line, below typical "dead air" spaces.

On a peaked, gabled, or cathedral ceiling, install the first Smoke Alarm within 3 feet (0.9 meters) of the peak of the ceiling, measured horizontally. Additional Smoke Alarms may be required depending on the length, angle, etc. of the ceiling's slope. Refer to NFPA 72 for details on requirements for sloped or peaked ceilings.

LIMITED WARRANTY

BRK Brands, Inc., ("BRK") the maker of First Alert® brand products warrants that for a period of ten years from the date of purcha will be free from defects in material and workmanship. BRK, at its option, will repair or replace this product or any component of though to be defective during the warranty period. Replacement will be made with a new or remanufactured product or component, is no longer available, replacement may be made with a similar product of equal or greater value. - In year damn, humid or steamy areas, or directly near hathrooms with showers. Keen units at least 10 feet (3 meters) away from showers, saunas, dishwashers, etc. Where the temperatures are regularly below 40° F (4.4° C) or above 100° F (37.8° C), including unheated buildings, outdoor rooms, porches, or unfinished attics or basements. . In very dusty, dirty, or greasy areas. Do not install a Smoke Alarm directly over the stove or range. Keep laundry room Smoke Alarms free of dust or lint.
- Near fresh air vents, ceiling fans, or in very drafty areas. Drafts can blow smoke away from the unit, preventing it from reaching the si In insect infested areas. Insects can clog openings to the sensing chamber and cause unwanted alarms
- Less than 12 inches (305mm) away from fluorescent lights. Electrical "noise" can interfere with the sensor. In "dead air" spaces. "Dead air" spaces may prevent smoke from reaching the Smoke Alarm.

AVOIDING DEAD AIR SPACES
"Dead air" spaces may prevent smoke from reaching the Smoke Alarm. To avoid dead air spaces, follow the installation recommendations below.

On ceilings, install Smoke Alarms as close to the center of the ceiling as possible, if this is not possible, install the Smoke Alarm at least 4 inches (102 mm) from the wall or corner. For wall mounting (if allowed by building codes), the top edge of Smoke Alarms should be placed between 4 and 12 inches (102 and 305 mm) from the wall/ceiling line, below typical "dead air" spaces. On a peaked, gabled, or cathedral ceiling, install the first Smoke Alarm within 3 feet (0.9 meters) of the peak of the ceiling, measured horizontally. Additional Smoke Alarms may be required depending on the length, angle, etc. of the ceiling's slope. Refer to NFPA 72 for details on requirements for sloped or peaked ceilings.

LIMITED WARRANTY

BRK Brands, Inc., ("BRK") the maker of First Alert® brand products warrants that for a period of ten years from the date of purchase, this product will be free from defects in material and workmanship. BRK, at its option, will repair or replace this product or any component of the product found to be defective during the warranty period. Replacement will be made with a new or remandatured product or component. If the product is no longer available, replacement may be made with a similar product of equal or greater value. This is your exclusive warranty. In some original retrievals, reproductions may be made with a similar journed or the original retail journed and the original retail journed and the original sales receipt. Proof of journed as in equired to obtain warranty performance. BRK dealers, service centers, or retail stores selling BRK products do not have the right to alter, modify or any way change the terms and conditions of this warranty. Should this product need to be returned, BRK Brands, inc. will be an all costs related to the return. This warranty does not cover normal wear of parts or damage resulting from any of the following: negligent use or misuse of the product, use on improper voltage or current, use contrary to the operating instructions, disassembly, repair or alteration by anyone other than BRK or an authorized service center. Further, the warranty does not cover Acts of God, such as fire, flood, hurricanse and formadose or any batterise that are included with this unit.

RECOMMENDED LOCATIONS FOR SMOKE ALARMS

Installing Smoke Alarms in Single-Family Residences The National Fire Protection Association (NFPA), recommends one Smoke Alarm on every floor, in every sleeping area, and in every bedroom. In new construction, the Smoke Alarms must be AC powered and interconnected. See "Agency Placement Recommendation of relatils, For additional coverage, it is recommended that you install a Smoke Alarm in all rooms, halls, schorage areas, finished, and basements, where temperatures normally remain between 40° F (4.4° C) and 100° F (37.8° C). Make sure no door or other obstruction could keep smoke from reaching the Smoke A

- On every level of your home, including finished attics and basements. Inside every bedroom, especially if people sleep with doors closed.
- In the hall near every sleeping area. If your home has multiple sleeping areas, install a unit in each. If a hall is over 40 feet (12 meters) long, install an Alarm at each end. At the top of the first-to-second floor stairway, and at bottom of basement stairway

IMPORTANT!

AGENCY PLACEMENT RECOMMENDATIONS

NFPA 72 CHAPTER 29 "FOR YOUR INFORMATION, THE NATIONAL FIRE ALARM AND SIGNALING CODE, NFPA 72, READS AS FOLLOWS:"
29.5.1* Required Detection. 29.5.1.1* Where required by other governing laws, codes, or standards for a specific type of occupancy, approved single and multiple-station smoke alarms shall be installed as follows:

- (1) *In all sleeping rooms and guest rooms (2) *Outside of each separate dwelling unit sleeping area, within 21 ft (6.4 m) of any door to a sleeping room, with the distance measured along a path of travel
- (3) On every level of a dwelling unit, including basements 4) On every level of a residential board and care occupancy (small facility), including basements and excluding crawl spaces and unfinished attics
- (5) *In the living area(s) of a guest suite (6) In the living area(s) of a residential board and care occupancy (small facility)
