Identify . Fix . Control

Ants

Identify

Ants can be a terrible hazard to your home and garden. They:

1. build tunnels that can cause lawn roots to dry out.
2. infest paved areas and remove the sand between pavers.
3. can get inside your home and damage the structure.

Ants are easy to identify - to control them however requires a bit of work.

Fix

Ants that live outside will travel inside the home to search for food.

- Cracks and crevices should be sealed to eliminate passages into the home.
- Scrub around entry points with a detergent (to remove the trail pheromone - invisible trails left by ants for other ants to find food sources).
- Eliminate active ants and nests by sprinkling a proven insecticide like Richgro Ant Killa.

Control

Ants can be controlled with a combination of good sanitation, removing pheromone trails, caulking entry points and eliminating active nests.
