# Identify . Fix . Control

## Bugs On Roses, Azaleas And Ornamentals

Identify

Azalea Lace Bug

Aphids

Scarab Beetle Larvae

Azalea Lace bugs, Aphids and Scarab Beetle Larvae are common bugs that attack your plants, in gardens and in pots. Control these type of pests and protect your plants from future attacks whilst promoting plant health all year round.

Fix

Keep your roses, azaleas and ornamentals **Bug-Free** with Richgro Bug Killa®

- Systemic insecticide - a longer lasting control of pests for up to 6 weeks
- Gently absorbed into the plant by plant roots for long-term protection
- Contains Iron and Zeolite which are beneficial to plant health
- Treats up to 500 plants
- Granulated - just apply and water in!
- For gardens and pots

**How to prepare:** wear rubber gloves when using this product. For best results, water plant well after applying granules as this ensures maximum penetration and contact with the roots.

Maintain

Be familiar with the appearance of your plants so it will be easy to identify problems. Examine your garden on a weekly basis to detect problems early. Also keep your garden healthy by adding organics to your soil and having a regular feeding, watering and mulching schedule. Your garden will then more easily defend itself against pests.
