**SPECIFICATIONS**

- **Input:** 18V
- **Bar Length:** 200mm
- **Cutting Length Max.:** 170mm
- **Chain Speed:** 3.76m/s
- **Oil Tank Capacity:** 125ml
- **Length:** 1.83 - 2.77m
- **Weight:** 3.9kg

**STANDARD EQUIPMENT**

- Pole
- Chain
- Guide Bar
- Guide Bar Cover
- Rear Handle
- Pruner Head
- Shoulder Strap
- Auxiliary Handle

---

**WARRANTY**

In order to make a claim under this warranty you must return the product to your nearest Bunnings Warehouse with your Bunnings Register receipt. Prior to returning your product for warranty please telephone our customer service helpline:

**Australia 1800 069 486**
**New Zealand 0508 069 486**

To ensure a speedy response please have the model number and date of purchase available. A customer service representative will take your call and answer any questions you may have relating to the warranty policy or procedure.

**WARNING**

The following actions will result in the warranty being void.

- If the tool has been operated on a supply voltage other than that specified on the tool.
- If the tool shows signs of damage or defects caused by or resulting from abuse, accidents or alterations.
- Failure to perform maintenance as set out within the instruction manual.
- If the tool is disassembled or tampered with in any way.

The benefits provided under this warranty are in addition to other rights and remedies which are available to you at law.

Our goods come with guarantees that cannot be excluded at law. You are entitled to a replacement or refund for a major failure and for compensation for any other reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure.

Generally you will be responsible for all costs associated with a claim under this warranty, however, where you have suffered any additional direct loss as a result of a defective product you may be able to claim such expenses by contacting our customer service helpline above.

**5 YEAR REPLACEMENT WARRANTY**

Your Product is guaranteed for a period of 60 months from the original date of purchase and is intended for DIY (Do It Yourself) use only. If a product is defective it will be replaced in accordance with the terms of this warranty. Lithium Ion batteries and chargers are covered by a 36 month warranty. Warranty excludes consumable parts, for example: guide bar, chain and included accessories.
**1. ASSEMBLY**

**CAUTION:** ENSURE THE TOOL IS OFF & THE BATTERY REMOVED BEFORE PERFORMING ANY OF THE FOLLOWING OPERATIONS.

**Fitting Rear Handle**
1. Push the rear handle fully onto tube aligning the internal prongs.
2. Screw tight with the assembly nut.

**Fitting Auxiliary Handle**
1. Place the Auxiliary Handle onto the mounting attachment.
2. Pass the bolt through the auxiliary handle and screw the lever to the end of the bolt.
3. Select the most comfortable position and close the lever to lock the auxiliary handle in position.
**Fitting Pruner Head**

1. Align the pruner head and the motor head so the arrows on both coincide.

2. (a) Press the pruner head against the motor head. This will cause the lock button to be pushed to the right.
   (b) Turn the pruner head clockwise. The pruner head will lock onto the motor head and is then secured in place.

*Note:* The Lock Button will “CLICK” back to the left (original position) when the pruner head is correctly secured in place.

**Fitting Guide Bar & Chain**

1. Loosen the chain cover lock and remove the side cover.

2. Place the chain in the groove of the guide bar as shown. Refer to the image printed on the guide bar that indicates the direction that the chain should face.

*IMPORTANT:* IF THE CHAIN IS INSTALLED BACKWARDS (CHAIN CUTTERS ARE FACING IN THE OPPOSITE DIRECTION OF ROTATION) THE POLE PRUNER WILL VIBRATE EXCESSIVELY AND NOT CUT.

3. Place onto the mount, ensuring that the chain sits around the chain sprocket.

4. Re-mount and finger-tighten the side cover with the chain cover lock.

*Note:* Only tighten the chain cover locking knob securely once the chain tension has been adjusted (see: Tensioning the chain.)

---

**2. TENSIONING THE CHAIN**

**CAUTION:** THE CHAIN HAS SHARP EDGES. FOR YOUR OWN SAFETY, PLEASE WEAR WORK GLOVES.

1. Loosen the chain cover lock. Do not remove the side cover.

**CAUTION:** IF YOU TRY TO ROTATE THE CHAIN TENSIONING ADJUSTMENT DIAL WHILST THE CHAIN COVER LOCK IS TIGHT, IT WILL RESULT IN THE CHAIN NOT LOOSENING AND POSSIBLE DAMAGE TO THE MECHANISM.

2. Adjust the chain tension with the chain tensioning adjustment dial. Turning the dial CLOCKWISE increases the chain tension, turning it COUNTER-CLOCKWISE decreases the chain tension.

   For the correct chain tension, firmly pull up on the chain at the middle of the top of the exposed guide bar. When the chain is pulled up to its highest point, the bottom tip of the links should only just stay in the track [middle of the guide bar]

3. After the chain has been accurately tensioned, lock the guide bar in place with the chain cover locking knob.

*Note:* Proper tension of the chain is extremely important and must be checked before starting, as well as during any cutting operation. Taking the time to make adjustments to the chain will result in improved cutting performance and prolonged chain life.
## 3. OIL

**IMPORTANT:** ONLY USE OIL THAT IS EXPRESSLY LABELLED "CHAIN BAR OIL".

1. Remove the chain bar oil cap.
2. Fill the tank with chain bar oil. The capacity of the chain oil tank is 125ml. Do not over fill.
3. Refit cap and clean any oil spillage.
4. Always fill oil tank when the oil level is below the minimum mark on the oil level window.

**WARNING:** NEVER START WORK UNLESS THE CHAIN AND BAR ARE LUBRICATED

4. To check the lubricating system, switch on the pole pruner and hold it with the guide bar and chain above some light coloured paper such as newspaper. A steadily increasing stain caused by oil spray shows the lubricating system is working.

**Note:** Chain bar oil may leak if the tool is left for long periods. This is normal. If the tool is to be left unused for an extended time, drain the oil from the tool. Refill before use.

## 4. PREPARATION

### Adjusting the telescope length

1. To unlock the telescopic tube lock, twist it in a clockwise direction while pointing the chain away from the user.

   **Note:** The locking and unlocking directions are indicated on the locking collar.

2. Pull out the telescopic tubes to suit the required working height.

3. To lock in the desired position, twist the telescopic tube lock in a counter-clockwise direction.

### Adjusting the Rear Handle

1. Press the two pivoting handle releases, one each side and adjust the angle of the handle up or down to any of 4 positions.

### Adjusting the Auxiliary Handle

1. (a) Open the handle lever and set the required (b) tilt of the auxiliary handle, close to lock into position.

2. (a) Open the mounting bracket lever and (b) slide the auxiliary handle into the required position, close to lock into position.

### Adjusting the lubricating system

1. Remove the chain bar oil cap.
2. Fill the tank with chain bar oil. The capacity of the chain oil tank is 125ml. Do not over fill.
3. To lock in the desired position, twist the telescopic tube lock in a counter-clockwise direction.

**WARNING!** NEVER START WORK UNLESS THE CHAIN AND BAR ARE LUBRICATED

4. To check the lubricating system, switch on the pole pruner and hold it with the guide bar and chain above some light coloured paper such as newspaper. A steadily increasing stain caused by oil spray shows the lubricating system is working.

**Note:** Chain bar oil may leak if the tool is left for long periods. This is normal. If the tool is to be left unused for an extended time, drain the oil from the tool. Refill before use.
5. INSERTING & REMOVING THE BATTERY

**Adjusting the Pruner Head**

- **Pivoting the Pruner Head**
  1. Press the two pivoting head releases, one each side and adjust the angle of the pruner head up or down to any of 7 positions.

- **Adjusting the Pruner Head 90°**
  1. Pull the lock button to the right then rotate the pruner head 90° clockwise

  **Note:** Keep the pruner head pressed against the motor head when rotating.

  2. The pruner head will lock onto the motor head and is then secured in place.

  **Note:** The Lock Button will “CLICK” back to the left (original position) when the pruner head is correctly secured in place.

**Installing a Battery into the Pole Pruner**

1. Align the ribs of the battery with the recess below the handle

2. Slide the battery in so that it clicks into place.

**Removing a Battery from the Pole Pruner**

1. Press and hold the battery release tab to release the battery.

2. Slide the battery out.

**Attaching the Shoulder Strap**

1. Fasten to the shoulder strap holder on the main tube.

2. Wear the shoulder strap so that it lies over the left shoulder.
6. SWITCHING ON/OFF

Switching On

1. Hold the pruner firmly with both hands.

2. Slide the switch lock (a) to the front with your thumb and hold, then squeeze the trigger switch (b).

3. The chain will now be running ready to make a cut. Release the switch lock (a).

Switching Off

3. Release the trigger switch. The chain and motor will quickly stop.

LIMBING

• Limbing is the process of removing the branches from a fallen tree. Check the direction in which a branch will bend before cutting it. Always cut on the opposite side to the bending direction so that the guide bar is not pinched in the cut. For large limbs that cannot be removed in one cut, make an initial cut from the bent side and finish by sawing from the opposite direction. Do not remove limbs that are supporting the fallen tree on the ground until the tree has been cut into lengths.

PRUNING

• Pruning is the removal of a limb or branch from a standing tree.

SAWING TECHNIQUES

• When removing branches, hold the pruner at an angle ranging from a maximum 60° to horizontal in order to avoid being struck by a falling branch.

• At the end of the cut, the weight of the pruner suddenly increases for the user, because it is no longer supported on the branch. There is the risk of losing control of the pruner.

• Saw off the lower branches on the tree first. By doing so, it is easier for the cut branches to fall to the ground.

• Only pull the pruner out of the cut with the chain running. By doing so, you can prevent it from getting jammed.

• Do not saw with the tip of the guide bar. This could lead to kick back and possible injury.

APPLICATIONS

WARNING! IF THE CHAIN COMES IN CONTACT WITH A HARD OBJECT, VISUALLY INSPECT THE CHAIN & BAR FOR DAMAGE. IF THE CHAIN OR BAR IS DAMAGED, DO NOT CONTINUE TO OPERATE THE POLE PRUNER.

WARNING!: NEVER USE THE POLE PRUNER WHEN STANDING ON A LADDER OR UNEVEN GROUND. DO NOT OVERREACH. ALWAYS USE BOTH HANDS TO HOLD THE POLE PRUNER.

CAUTION: ALWAYS USE THE BUCKING SPIKES WHEN PERFORMING CUTS WITH THE POLE PRUNER TO AVOID KICKBACK (REFER TO OPERATION SECTION OF MANUAL).

CAUTION: ENSURE APPROPRIATE CARE IS TAKEN WHEN CUTTING ABOVE SHOULDER HEIGHT.
MAINTENANCE

WARNING: BEFORE CLEANING YOUR POLE PRUNER OR CARRYING OUT ANY MAINTENANCE PROCEDURE, MAKE SURE THAT THE MOTOR IS OFF AND THE BATTERY REMOVED TO PREVENT ACCIDENTAL STARTING.

CAUTION: ALWAYS WEAR GLOVES WHEN HANDLING THE CHAIN AS IT IS VERY SHARP AND CAN CUT YOU WHEN IT IS NOT MOVING.

Maintaining the guide bar
1. Remove any sawdust from the guide bar, including the groove. Oil and sawdust combine and emit a burning smell during operation if the blade is not regularly cleaned.
2. Make sure that the oil port is not clogged. Grease the nose sprocket at the tip of the guide bar.
3. Check for oil leakage and loose fastenings, especially those securing the handles and the guide bar.
4. Reverse the guide bar every 8 working hours to ensure uniform wear. Check the guide rails frequently and if necessary remove burrs and square up the rails using a flat file.

Chain Sharpening
Chain File: 3.96mm (5/32”)
Chain Pitch: 9.53mm (3/8”)
Chain Gauge: 1.3mm (0.050”)

Sharpen the chain regularly to maintain optimum performance of the saw. Signs of a dull chain are:
• The sawdust becomes powder-like
• Extra force is required to execute a cut
• The cut does not track in a straight line
• Increased vibration

Sharpen each cutter using a round 3.96mm (5/32”) chain file. Keep the file level with the top plate of the tooth. Always use outward strokes and maintain a 30° angle between the chain and file. After sharpening, the cutters must all have the same width and length. After every 3–4 uses get an authorised repair centre to professionally sharpen your chain. They have the special tools necessary to ensure the correct cutting angles and depths.

SPARE PARTS

Chain Replacement:
The chain can be purchased through Ozito spare parts or from your local Bunnings Warehouse. The correct chain can be purchased by matching the pitch, gauge and number of links as shown below:

9.53 mm(3/8)  1.3 mm(.050”)  33 Links

Spare parts can be ordered from the Special Orders Desk at your local Bunnings Warehouse.

For further information, or any parts not listed here, visit www.ozito.com.au or contact Ozito Customer Service:

Australia 1800 069 486
New Zealand 0508 069 486
E-mail: enquiries@ozito.com.au

CARRYING FOR THE ENVIRONMENT

Power tools that are no longer usable should not be disposed of with household waste but in an environmentally friendly way. Please recycle where facilities exist. Check with your local council authority for recycling advice.

Recycling packaging reduces the need for landfill and raw materials. Reuse of recycled material decreases pollution in the environment. Please recycle packaging where facilities exist. Check with your local council authority for recycling advice.
ELECTRICAL SAFETY

WARNING! When using mains-powered tools, basic safety precautions, including the following, should always be followed to reduce risk of fire, electric shock, personal injury and material damage. Read this whole manual carefully and make sure you know how to switch the tool off in an emergency, before operating the tool. Save these instructions and other documents supplied with this tool for future reference.

The charger has been designated for 230V and 240V only. Always check that the power supply corresponds to the voltage on the rating plate.

GENERAL POWER TOOL SAFETY WARNINGS

WARNING! Read all safety warnings and instructions. Failure to follow the warnings and instructions may result in electric shock, fire and/or serious injury.

1. Work area safety
   a. Keep work area clean and well lit. Cluttered or dark areas invite accidents.
   b. Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools create sparks which may ignite the dust or fumes.
   c. Keep children and bystanders away while operating a power tool. Distracted persons can cause you to lose control.

2. Electrical safety
   a. Power tool plugs must match the outlet. Never use an adapter or extension cord with a power tool. Doing so can create a risk of electric shock.
   b. Avoid body contact with earthed or grounded surfaces, such as pipes, radiators, ranges and refrigerators. There is an increased risk of electric shock if your body is earthed or grounded.
   c. Do not expose power tools to rain or wet conditions. Water entering a power tool will increase the risk of electric shock.
   d. Do not abuse the cord. Never use the cord for carrying, pulling or unplugging the power tool. Keep cord away from heat, oil, sharp edges or moving parts. Damaged or entangled cords increase the risk of electric shock.
   e. When operating a power tool outdoors, use an extension cord suitable for outdoor use. A used cord for outdoor use reduces the risk of electric shock.

3. Personal safety
   a. Stay alert, watch what you are doing and use common sense when operating a power tool. Do not use power tool while you are tired or under the influence of drugs, alcohol or medication.
   b. Dress properly. Wear snug-fitting, long-sleeved clothing and gloves. Never wear jewelry or loose clothing. Long hair must be tied up to avoid entanglement.
   c. Prevent unintentional starting. Ensure the switch is in the off-position before connecting to power source and/or battery pack, picking up or carrying the tool. Carrying power tools with your finger on the switch or energizing power tools that have the switch on invites accidents.
   d. Remove any adjusting key or wrench before turning the power tool on. A wrench or a key left attached to a rotating part of the power tool may result in personal injury.
   e. Do not overreach. Keep proper footing and balance at all times. This helps prevent unintentional starting, loss of control, and reduces the risk of injury when unexpected contact with the tool occurs.
   f. Do not force the power tool. The correct power tool will do the job better and safer at the rate for which it was designed. The correct power tool will minimize the risk of personal injury.
   g. Use the power tool, accessories and tool bits etc. in accordance with these instructions, taking into account the working conditions and the work to be performed. Do not use the tool for purposes not intended.
   h. Follow the manufacturer’s and/or supplier’s instructions regarding the use of the tool.

4. Power tool use and care
   a. Do not force the power tool. Use the correct power tool for your application. The correct power tool will do the job better and safer at the rate for which it was designed.
   b. Do not run the power tool if the switch does not turn on or off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
   c. Disconnect the plug from the power source and/or the battery pack from the power tool before making any adjustments, changing accessories, or storing the power tool. Such preventive safety measures reduce the risk of starting the power tool accidentally.
   d. Store idle power tools out of reach of children and do not allow persons unfamiliar with the power tool or these instructions to operate it. Power tools are dangerous in the hands of unauthorized users.
   e. Maintain power tools. Check for misalignment or binding of moving parts, breakage of parts and any other condition that may affect the power tool’s operation. If damaged, have the power tool repaired before use. Many accidents are caused by poorly maintained power tools.
   f. Keep cutting tools sharp and clean. Properly maintained cutting tools with sharp cutting edges are less likely to bind and are easier to control.
   g. Use the power tool, accessories and tool bits etc. as recommended by the manufacturer. Use of any other battery packs may result in a risk of injury and fire.
   h. Avoid distractions while operating power tools. Do not operate a power tool while you are tired or under the influence of drugs, alcohol or medication.

5. Battery tool use and care
   a. Recharge only with the charger specified by the manufacturer. A charger that is suitable for one type of battery pack may create a risk of fire or explosion when used with another battery pack.
   b. Use battery packs and accessories specified by the manufacturer. An accessory that is suitable for one type of battery pack may create a risk of injury and fire if used with another battery pack.
   c. When battery pack is not in use, keep it away from other metal objects, like paper clips, nails, screwdrivers, or other small metal objects that can make a connection from one terminal to another. Shorting the battery terminals may cause burns or a fire.
   d. Under abusive conditions, liquid may be ejected from the battery; avoid contact. If contact accidentally occurs, flush with water. Liquid ejected from the battery may cause irritation or burns.
   e. Service. Have your power tool serviced by a qualified repair person using only identical replacement parts. This will ensure that the safety of the power tool is maintained.

POLE PRUNER SAFETY WARNINGS

This appliance is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lacking experience and knowledge, unless they have been given supervision or instruction concerning use of the appliance by a person responsible for their safety.

Young children should be supervised to ensure that they do not play with the appliance.

Recommends for the use of a residual current device with a rated residual current of 30mA or less.

- Keep all parts of the body away from the saw chain when the saw is operating. Before you start the chain saw, make sure the saw chain is not contacting anything. A moment of inattention while operating chain saws may cause entanglement of your body to the chain.
- Always hold the chain saw with your right hand on the handle and your left hand on the front handle. Holding the chain saw with a reversed hand configuration increases the risk of personal injury and short-circuiting of the electrical system.
- Wear safety glasses and hearing protection. Protective equipment such as dust masks, non-slip white shoes, hard hat, or hearing protection must be available for the appropriate condition will reduce personal injuries.
- Prevent unintentional starting. Start the engine of the saw only after checking and ensuring they are connected and properly used.
- Use power tools only with specifically designated battery packs. Use of any other battery packs may result in a risk of injury and fire.
- Do not use the power tool if the switch does not turn on or off. Any power tool that cannot be controlled with the switch is dangerous and must be repaired.
- Do not operate the power tool near flammable materials or flammable gases. Such operation may result in fire or explosion.
- Always keep proper footing and operate the chain saw only when standing on fixed, secure and level surface. Slippery or unstable surfaces such as ladders may cause a loss of balance or control of the chain saw.
- When cutting a limb that is under tension be alert for spring back. When the tension in the wood fibres is released the spring loaded limbs may strike the operator and/or throw the chain saw out of control.
- Use extreme caution when cutting brush and saplings. The slender material may catch the saw chain and be whipped toward you or pull you off balance.
- Keep handles dry, clean, and free from oil and grease. Greasy, oily handles are slippery causing loss of control.
- Cut wood only. Do not use chain saw for purposes not intended. For example: do not use chain saw for cutting plastic, paper or non-wood building materials. Use of the chain saw for operations different than intended could result in a hazardous condition.

Kickback

Kickback may occur when the nose or tip of the guide bar touches an object, or when the wood closes in and pinches the saw chain in the cut. Tip contact in some cases may cause a sudden reverse reaction, kicking the guide bar up and back towards the operator.

Pinching the saw chain along the top of the guide bar may push the guide bar rapidly back towards the operator. Either of these reactions may cause you to lose control of the saw which could result in serious personal injury. Do not rely exclusively upon the safety devices built into your saw. As a chain saw user, you should take several steps to keep your cutting jobs free from accident or injury.

Kickback is the result of tool misuse and/or incorrect operating procedures or conditions and can be avoided by taking proper precautions as given below. Be aware that kickback increases the danger of personal injury and death.
- Maintain a firm grip, with both hands and fingers encircling the chain saw handles, with both hands on the saw and position your body and arm to allow you to resist kickback forces. Kickback forces can be controlled by the operator, if proper procedures are taken. Do not let go of the chain saw.
- Do not overreach and do not cut above shoulder height. This helps prevent unintended tip contact and enables better control of the operator.
- Follow the manufacturer’s sharpening and maintenance instructions for the saw chain. Decreasing the depth gauge height can lead to increased kickback.

Push Back

Push Back will occur if an attempt is made to saw with the top of the guide bar, if the chain touches against a rigid object and jams in the cut.

Pull Forward

If the bucking spikes are not set against the timber, the chain at the bottom of the guide bar will pull the saw forward; this can jam the chain in the timber.

To avoid this always have the bucking spikes set against the timber when performing a cut.

If the supply cord is damaged, it must be replaced by an electrician or a power tool repairer in order to avoid a hazard.

Notes: Double insulation does not take the place of normal safety precautions when operating this tool. The insulation system is for added protection against injury resulting from a possible electrical insulation failure within the tool. The power product for this products charger is protected by a residual current device (RCD) at 30mA or less. A residual current device reduces the risk of electric shock.
