Symbol	Description
	Light
*	Defrost
$\bigotimes$	Fan forced
	Full grill
*	Fan with full grill

Please note that the cooling fan will continue to run for some time even when the oven has been turned to the off position.

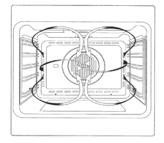

# Instructions for use

## Fan forced cooking

For this type of cooking a fan positioned at the back allows the circulation of hot air inside the oven, creating uniform heat. In this way cooking is more rapid than conventional cooking. It is a suitable method for cooking dishes on more than one shelf, especially when the food is of different types (fish, meat etc.).

# Defrosting

When you select the 'defrost' inside the fan will circulate room-temperature air inside the oven to quickly defrost frozen food.

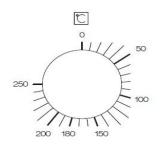

# **Grill Cooking**

Use this function to grill or brown foods. Some ovens may be equipped with an electric motor, spit and skewers for turning on the spit.

Place the shelf with the food to be cooked in the 1st or 2nd position from the top. Pre-heat the oven for 5 minutes.

# **Temperature Regulation**

Use the thermostat to set the temperature you require. The temperature can be adjusted from 0 to 250 "C which is max heat.

# **Oven Light Control**

In order to achieve the best results in terms of performance and energy consumption, this function is automatically managed by the oven during its functioning. If you want to turn it on at any time, just turn the function knob on the control panel.
