Blower Vac Assembly and Owner's Manual

WARNING! Read this manual before operating your Blower Vac

IMPORTANT INFORMATION

Congratulations on your purchase of a top quality VICTA Blower.

This instruction manual will aid in the assembly, operation and maintenance of your new Blower. Please read carefully to ensure safety and the long life of your product.

WARNING Read all safety warnings and all instructions before use! Failure to follow the warnings and instructions may result in fire and/or serious injury. Save all warnings and instructions for future reference.

Do not operate the unit before reading this manual!

Keep this instruction manual in a safe place for future reference or if service is required on your unit.

General safety regulations

Warning!

Be careful of objects being thrown out!

Read the directions for use before operating the machine.

Read the manual before carrying out any maintenance work.

Wear safety goggles, a helmet and ear protection.

Wear sturdy, enclosed safety boots.

Wear safety gloves.

Protect the machine from rain and damp. Do not use in rain.

Warning! Rotating parts! Be sure impeller cover is fitted secure.

Bystanders must be at least 15 metres away from operating unit.

- Read the instructions carefully. Ensure you are familiar with all controls and learn how to operate the machine properly.
- Stay alert and watch what you are doing when operating a power tool. Do not operate the blower under the influence of alcohol, drugs or medication or when you are tired or sick.
- Operate the blower at reasonable hours only - not early in the morning or late at night when people might be disturbed. Check with your local council for operation times.
- Do not operate the blower indoors or in confined spaces.
- While the blower is running, always keep hands and feet away from blower tube. (Keep away from any bystanders or animals when in use.)
- Use only manufacturer's genuine recommended replacement parts and accessories.

NOTE – WARRANTY DETAILS ARE NOT WRITTEN WITHIN THIS OPERATOR'S MANUAL. REFER TO OTHER DOCUMENTS SUPPLIED WITH THIS MACHINE FOR WARRANTY DETAILS.

THE WARRANTY DOCUMENTS MAY INCLUDE TECHNICAL SPECIFICATIONS THAT ARE SPECIFIC TO EACH MODEL THAT ARE NOT WRITTEN WITHIN THIS OPERATOR'S MANUAL.

QUICK START

Quick Start Guide

Check the position & operation of controls to ensure you are comfortable before you start using the machine.

Check all components are assembled as per assembly instructions on page 6.

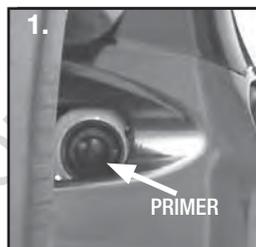

Before every use, check the machine for the following:

- That there are no leaks in the fuel system
- That all screws are securely fastened
- Blower nozzles and impeller cover are secured in the correct position

Quick Start Guide

1 – Get ready...

- Place the Blower on a hard, level surface.
- Press the PRIMER 10 times.

2 – Set

- Set the choke lever to "COLD" position.

3 – Go!

- Pull the starter cord until you feel it resist.
Then tug sharply on the starter cord 2 or 3 times.
- * The engine may start or run for a short period set on cold. Choke can be set to hot while the engine is running.
- Now, set the choke lever to the "HOT" position.
- If required, tug sharply on the starter cord 2 or 3 times or until the engine starts
- * * In cold conditions, the engine may require 5-10 seconds running at idle. Pulling the trigger during warm-up may help starting.

CAUTION! ENSURE FEET, LEGS & HANDS ARE CLEAR OF THE IMPELLER COVER AND BLOWER TUBE/NOZZLE

SAFETY & HANDLING

Safety Instructions

Transporting the blower

- Proper handling of the blower will reduce the risk of personal injury. When transporting the blower make sure to always switch off the blower, remove any fuel and the blower tube.

Before using the blower

- **The operation of any power tool can result in foreign objects being thrown into your eyes, which can result in severe eye damage. Before using the blower, always wear goggles or safety glasses with side shield and a full-face shield when needed. Always wear nonslip safety shoes, ear muffs and a dust mask when operating.**
- Do not start the blower until you have studied the instruction manual.
- Know the blower controls and learn how to stop operating the unit quickly in an emergency by pressing the **STOP** switch.
- Before using the blower ensure it is not worn or damaged.
- Ensure all screws and fasteners are tightened before use
- Discontinue use and switch off blower if operation is irregular. Have the blower inspected by authorised service technician before restarting.

Operating the blower

- When using the blower, hold the handle firmly at all times. Discontinue use if discomfort occurs from vibration. Avoid long exposure without rest periods.
- Keep all body parts away from the blower nozzle end. Make sure the unit is OFF and spark plug is disconnected when clearing jammed material.
- Keep your work area clean and well lit.
- Do not operate power tools in explosive atmospheres, such as in the presence of flammable liquids, gases or dust. Power tools can create sparks which may ignite the dust or fumes.
- Keep children, bystanders and pets away when operating the power tool. Ensure there is a minimum distance of 15 metres.
- Dress properly. Do not wear loose clothing or jewellery. Keep your hair, clothing and gloves away from moving parts. Loose clothes, jewellery or long hair can be caught in blower impeller & cause damage or injury.
- Operate only in daylight or good artificial light.
- Keep hands away from nozzle end and impellor cover when the blower is running.
- Walk with the blower. Never run.
- To maintain full control of the blower, keep a proper footing at all times with your weight evenly balanced over both feet and never over reach.
- Always keep the handle dry and free from oil and grease.

Safety Instructions

- Always stop the blower and disconnect spark plug if the following conditions apply;
 - if a foreign object enters the blower tube or impeller and the blower begins to vibrate abnormally, STOP the operation and inspect for any damage or blockages.
 - before clearing any blockage.
 - before checking, cleaning or working on the unit.
 - whenever leaving the blower unattended.
 - if the unit becomes jammed.
 - if the unit becomes excessively hot.
- Do not use the blower if the switch does not turn it ON and OFF.
- Store blower out of the reach of children
- Blowers are not intended for use by children.
- Do not allow persons unfamiliar with these instructions to operate the blower.
- Always use blower with full blower nozzle extension so air stream can be close to the ground. Do not operate blower without nozzle attachment securely assembled (pg 6).

Maintaining the blower

- Periodically check the blower for correct assembly, breakage of parts and any other condition that may affect the blower operation. If damaged, have the unit repaired before use.
- Store the blower in a well ventilated area, away from any naked flames such as those found in gas hot water heaters.
- VICTA recommends that all maintenance, repair and inspection work be carried out by a VICTA Authorised Service Centre.
- Check blower tube is correctly attached before and after each use.

SAFETY & HANDLING

Safety instructions

The following safety precautions must be strictly observed to avoid the risk of damage or personal injury.

Do not start or operate the unit inside a closed room or building. Breathing exhaust fumes can kill.

Be careful when operating the unit on slippery ground or overgrown terrain. Be attentive for concealed hazards, such as ditches, tree stumps and roots.

Maintain solid footing and balance while operating the unit. Operate only on ground level.

Do not operate on elevated structures such as ladders or roofs.

Do not cover blower tube end. Do not block modify or insert objects into blower end tube. When handling blower for assembly or maintenance tasks, always wear protective gloves.

Bystanders must be at least 15 metres away during operation of the unit as rocks and other materials may be thrown at high velocities. Switch the unit off immediately if approached.

Keep body away from hot muffler parts.

Stop the blower immediately if the blower starts to vibrate abnormally.

Do not blow above shoulder height. Always point to blower towards the ground.

Never aim/blow at people or animals and do not operate near open windows.

Do not insert object into impeller cover or use the blower to propel or fire projectiles.

Hazards

NOTE : The following safety precautions must be strictly observed to avoid the risk of damage or personal injury.

- Check all fasteners regularly. Always ensure that the blower is in a safe operating condition.
- Never try to clear debris from the blower while the unit is in operation.

Personal Safety Equipment

Recommended safety equipment to wear when working with your blower.

Ear muffs

Eye protection

Safety boots

Safety Gloves

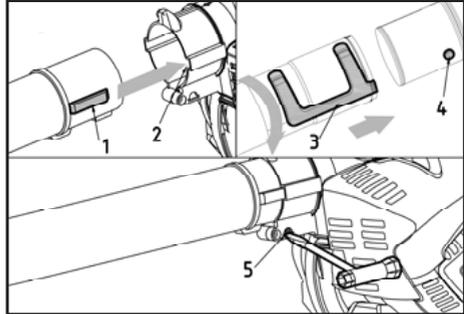

Dust mask

Assembly

Blower tube assembly.

- Align the keyway of the first upper tube (1) with the air outlet compartment (2), then push the tube until it is fitting firmly in place.
- Align the keyway of the lower blower tube (3) with the protrusion (4) of the upper tube, push the tube in and rotate it 90 degrees clockwise to one of the two foreseen positions, until it is fitting firmly in place.

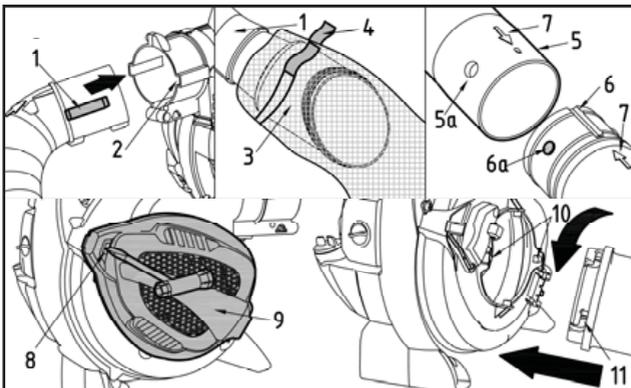

NOTE Fit the lower tube with a flat or round end depending on the type of work to be accomplished.

To remove the upper tube (1), insert the screwdriver included in the kit in the hole (5) and press firmly until you can slide the tube out from the air outlet nozzle.

Use as a vacuum collector.

- Align the protrusions of the bag coupling tube (1) with the air outlet compartment (2), then push the tube until it is fitting firmly in place.
- Insert the end nozzle of the coupling tube (1) in the bag inlet (3) and close the inlet with the Velcro fastener provided (4).
- Connect the first vacuum tube (5) to the second (6), aligning the two reference arrows (7) and pushing it as far as possible until the protrusion (6a) of the second tube is firmly inserted in the hole (5a) of the first vacuum tube.
- Insert the screwdriver included in the kit in the hole (8) and press to release the catch and open the intake grille (9).
- Align the reference plugs (10) with their respective compartments (11) on the first vacuum tube and turn it counter clockwise, until it is fitted firmly in place.
- Position the bag over the shoulder and use the adjustable shoulder strap to regulate the height.

NOTE The machine is correctly assembled when the rounded part of the chute is pointed towards the ground.

OPERATING INSTRUCTIONS

Before Starting Machine

Check the position & operation of controls to ensure you are comfortable before you start using the machine.

Check all components are assembled as per assembly instructions on page 6 before starting the machine.

Check the machine for the following each time before use:

- That there are no leaks in the fuel system
- That all screws are securely fastened
- Blower air tube, blower nozzle and impeller cover are secured in the correct position

NOTE: Do not use the blower unless fully assembled. Both blower air tube and blower nozzle to be assembled.

Fuel and Oil

Recommended fuels

- Use only a mixture of normal unleaded petrol and 2-stroke engine oil. Mix the fuel mixture as indicated on the fuel mixing table.
- Start the machine at least 3m away from the refuelling site to avoid the possible risk of fire.
- Do not smoke whilst refuelling or working with the machine.
- Do not use the blower near inflammable liquids or gases. This could result in an explosion and/or fire.
- Pour the correct quantities of petrol and 2-stroke oil into a container. Then shake the container well.
- Add 450ml of fuel/oil mix into the fuel tank and secure cap.

NOTE: Product may need to be reprimed if it has run out of fuel.

- **Victa recommends the use of Victa Formula V 2-stroke oil at 50:1 fuel to oil ratio only.**
- **The use of other oils and or ratios will affect the engine lubrication, which may cause engine damage and void engine manufacturer's warranty.**
- **Do not use a fuel mixture which has been kept for longer than 90 days, it may damage the unit.**
- **Only use containers designed and approved for the purpose to transport and store fuel.**

Fuel Mixture Table

| Petrol (unleaded) | 2-stroke oil |
|--|--|
| 5 litre | 100 ml (Only for Victa Formula V 2-stroke Oil) |
| Mixing procedure: 50 parts unleaded petrol to 1 part 2-stroke oil | |
| USE Clean fresh "Regular Unleaded Fuel" Fuel with up to 10% ethanol can be used | |

Starting Instructions-Cold Engine Start

COLD STARTING

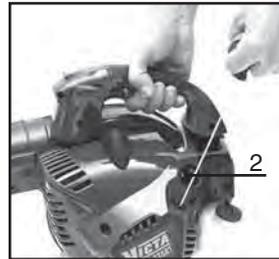

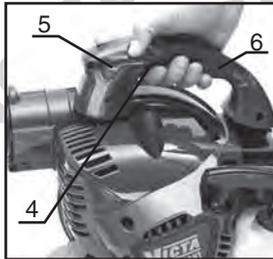

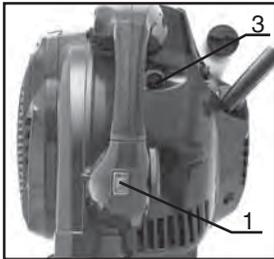

A "cold" start of the engine means starting it after at least 5 minutes from when it was switched off or after refuelling.

1. Operate the starter, moving lever (2) to «CHOKE».
2. Press the primer device button (3) 7 to 10 times to prime the carburettor.
3. Hold the machine firmly with one hand on the hand grip (6), in order not to lose control of the machine during starting.
4. Pull the starter rope slowly for 10 - 15cm until you feel some resistance, then tug it hard a few times until you hear the engine turn over.

IMPORTANT To avoid breaking the starter rope, do not pull the whole length of it or let it slide along the edge of the cable guide hole. Release the starter gradually, to avoid letting it fly back uncontrollably.

5. Switch the lever (2) to the «RUN» position.
6. Pull the starter grip again, and press the throttle trigger all the way (4) until the engine starts as normal.
7. When the engine has started, press and release the throttle trigger (4) to allow the engine to run idle.
8. Rev the engine a little using the throttle trigger to warm it up before using the machine.

NOTE: If the starter rope is pulled repeatedly with the choke on, it may flood the engine and make starting difficult. If you happen to flood the engine, repeat the hot start procedure a few times to eliminate any excess fuel.

OPERATING INSTRUCTIONS

Starting Instructions-Hot Engine Start

To hot start the engine immediately after it has stopped, follow steps 2 - 3 - 4 - 6 of the cold start procedure, making sure the primer (3) is activated 2-3 times only.

If the engine does not start up after several attempts, read the section on trouble shooting.

Always pull the starter out in a straight line.
IF THIS IS NOT FOLLOWED, STARTER CORD
WILL BE FRAYED AND CORD WILL BREAK!

Adjusting The Speed

Rotor rpm must be proportionate to the type of work and regulated by the throttle trigger (4) located on the upper handgrip. The throttle trigger can be held in any required position engaging the throttle setting device (5).

Stopping The Engine

To Stop the Engine:

- Turn the throttle setting device downwards (5).
- Release the throttle trigger (4).
- Press and hold the switch (1) in the (O) position until the engine switches of, then release the switch which will automatically move to the (I) position ready for the next start procedure.

Blowing tips

Blower

When using your blower always hold the unit with a minimum distance of 15cm between you and the blower at all times.

The blower tube should always face forward, always keep the blower tube in front and pointed away from yourself when in use.

Work in one direction. Using the blower in one direction will stop you from back tracking or blowing leaves into areas you have already cleared.

Blowing tips Cont'd

Blower sweeping technique

The sweeping method is achieved when the blower is swayed back and forth from left to right while the unit is held slightly in front.

- Use rake or broom to loosen debris before blowing.
- It is recommended to slightly dampen surfaces or use a mister attachment in dusty conditions.

MAINTENANCE CARE

General maintenance

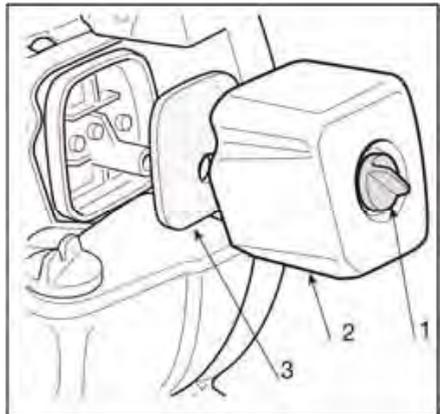

Maintenance of the air filter

Always switch off the machine and disconnect spark plug H.T. lead before carrying out any maintenance work.

IMPORTANT Cleaning the air filter is essential to guarantee the efficiency and duration of the machine. Do not work with a damaged filter or without a filter, as this could permanently damage the engine. It must be cleaned after every 8-10 working hours.

Clean the filter as follows:

- Loosen the knob (1), remove the cover (2) and the filter element (3).
- Wash the filter element (3) with soap and water. Do not use petrol or other solvents.
- Leave the filter to dry in the open air.
- Replace the filter element (3) and the cover (2) and tighten the knob (1).

MAINTENANCE & CARE

General maintenance

Never clean the air filter with petrol or inflammable solvents.

Make sure Air Filter is fitted correctly, (warranty will be void if engine is damaged due to incorrect fitment)

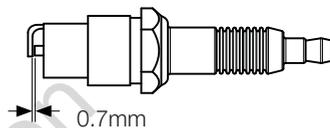

Do not run engine without a clean filter and cover fitted.

Maintenance of the spark plug

Bosch WSR6F

Spark plug gap = (0.6 - 0.7 mm).

Tighten the spark plug with a torque of 15 - 22 Nm.

1.

2.

Maintenance of the spark plug

Check the spark plug for carbon deposits after 10 hours of operation and if necessary clean. Thereafter service the spark plug after every 25 hours of operation.

1. Pull off the spark plug boot by twisting side to side gently.
2. Remove the spark plug with the supplied spark plug tube spanner.
3. Assemble in reverse order.

Maintenance and Storage

Keep all nuts, bolts and screws tight to be sure the appliance is in safe working condition. Check the blower frequently for wear or deterioration.

Replace worn or damaged parts.

Use only genuine replacement parts and accessories.

Store the appliance only in a dry place.

General maintenance

Maintenance Safety

- Stop the engine and disconnect the spark plug H.T. lead before clearing blockages, checking or working on the unit.
- Stop the engine, disconnect the spark plug H.T. lead and inspect the unit if it begins to vibrate abnormally.
- Use only genuine VICTA replacement parts.

Clearing an Inlet Blockage

Foreign material may cause a blockage in the inlet chute of your Blower. Ensure the impeller cover is not blocked or covered.

If necessary open impeller cover and clear blockage as required.

When clearing blockages;

- Switch your Blower off using the STOP switch
- Disconnect the spark plug H.T. lead.
- Wear safety gloves

Cleaning & storage

- Carry out all the maintenance work.
- Drain the fuel out of the tank.
- When the fuel has been drained, start the engine.
- Allow the engine to run at idling speed until it stops. This will clean the remainder of the fuel out of the carburettor.
- Allow machine to cool before storing.
- Clean the exterior of the blower thoroughly using a soft brush and cloth.
Note: Do not use water, solvents or polishes.
- Store the blower in a dry secure place out of reach of children.
- Do not place any other objects on top of the blower.
- Use only genuine replacement parts made and guaranteed by VICTA.
Insist on them from your parts and service dealer.

For your safety, use only genuine replacement parts made and guaranteed by VICTA. Insist on them from your parts and service dealer.

NOTE: Have your blower serviced at a Victa approved service centre using only identical replacement parts. This will ensure that the safety of the blower is maintained.

TROUBLESHOOTING

Maintenance Chart

Refer to the following table for routine maintenance.

| Features | Requirements | Before use | After finish | Refuelling | Monthly | Yearly | If damaged | As required |
|--------------------------------------|-----------------------------------|------------|--------------|------------|---------|--------|------------|-------------|
| Whole unit | Visual inspection (leaks) | ● | | ● | | | | |
| Throttle lever | Check operation | ● | | | | | | |
| Throttle trigger interlock | Check | ● | | | | | | |
| Stop switch | Check | ● | | | | | | |
| Fuel tank | Clean | | ● | | | | | |
| Blower housing/impeller cover | Check & clean | | ● | | | | | ● |
| Air filter | Check | | | | ● | | | |
| | Clean | | | | ● | | | ● |
| | Replace (Depending on conditions) | | | | | | ● | ● |
| Cowling | Clean | | ● | | | | | |
| Cylinder fins | Clean | | | | | | | ● |
| Spark plug | Clean & re-adjust gap | | | | | ● | | ● |
| All accessible fasteners | Retighten | ● | | | | | | ● |
| Muffler | Inspect | ● | | | ● | | | |
| | Inspect spark arresting screen | | | | | ● | | ● |
| | Clean or replace | | | | | | ● | ● |

Always stop the engine before any maintenance is done on the unit. When all parts have stopped rotating, disconnect the spark plug lead to begin maintenance work.

Never attempt maintenance that is not outlined in this manual. All repair work must be carried out by a Authorised Service Centre.

Troubleshooting

The following chart lists problem symptoms causes and corrective actions if your blower does not operate properly. If these do not identify and correct the problem contact your local VICTA service centre.

| Problem | Possible cause | Remedy |
|---|---|--|
| Engine will not start Spark plug (no spark) Ignition system (no spark) Engine won't start - Good compression, sufficient fuel (with spark) Poor compression, sufficient fuel (with spark) No fuel in carburettor (with spark) | Electrode is wet or fouled | Dry spark plug or replace |
| | Carbon deposit on electrode | Clean spark plug or replace |
| | Cracked insulator | Replace spark plug |
| | STOP SWITCH in OFF position | Switch to ON |
| | Too small or large electrode gap | Adjust gap to 0.6 - 0.7mm |
| | Burned electrode | Replace spark plug |
| | Coil burned out, coil insulation failure | Contact Service Centre or replace |
| | Break in coil wire, transistor burned out | Contact Service Centre or replace |
| | Engine flooded | Discharge excess fuel by setting choke lever to hot and pull cord whilst depressing throttle trigger |
| | Excessively thick fuel | Contact Service Centre or replace fuel |
| Use of incorrect fuel | Drain and replace with correct fuel | |
| | Excessive wear on cylinder, piston, rings | Contact Service Centre |
| | Loose spark plug | Tighten spark plug |
| | No fuel in tank | Refuel |
| | Loose fuel line fitting | Contact Service Centre |
| | Clogged fuel line | Contact Service Centre |
| | Plugged air vent in fuel tank | Clean vent or replace |
| | Run out of fuel after use | Refuel and reprime as necessary |
| | Fuel filter blocked | Replace fuel filter |
| Insufficient power Blockages Overheating | Clogged air filter | Clean or replace |
| | Carbon build up in muffler | Contact Service Centre |
| | Fuel line/passage clogged | Contact Service Centre |
| | Piston seizure, diaphragm inoperative | Contact Service Centre |
| | Water in fuel | Contact Service Centre or change fuel |
| | Excessively lean fuel mixture | Contact Service Centre |
| | Carbon deposits on piston | Contact Service Centre |

TROUBLESHOOTING

More Details

| Problem | Possible cause | Remedy |
|---|--|---|
| Insufficient power (cont) Engine makes knocking noise | Improper fuel mixing ratio Machine is overworked Fan cover, cylinder fins, etc. dirty Cylinder overheating Use of incorrect fuel | Replace with correct 25:1 fuel mix Operate properly – do not overload Clean and remove dirt and debris Clean fins Replace with correct fuel |
| Poor acceleration Fuel system clogged Air leakage | Fuel filter clogged Excessively low idle Excessively lean carburettor setting Clogged air filter Loose carburettor Loose fuel pick up tube | Contact Service Centre or replace Speed up idle/Contact Service Centre Contact Service Centre Clean filter Contact Service Centre Insert firmly/Contact Service Centre |
| Engine stops during operation Engine stops abruptly Miscellaneous | Stop switch is set to off position Shorting of spark plug Piston scored, ignition failure Fuel tank empty Carburettor or fuel tank clogged Impeller clogged | Ensure stop switch is set to on Clean spark plug or replace Contact Service Centre Refuel Contact Service Centre Remove blockage |
| Engine is difficult to shut off Overheating or electrical fault | Overheated engine Overheated spark plug Defective stop switch Poor contact of ground wire | Run at idle before switching off Clean & adjust gap 0.6 - 0.7mm Contact Service Centre or replace Contact Service Centre |
| Unit main body Irregular vibration Can not assemble blower air tube to main body | Loose impeller Bent main shaft Worn shaft bearings Damaged impeller Loose engine mounts Screw still in main body Debris on main body and/or blower air tube | Contact Service Centre Contact Service Centre Contact Service Centre Contact Service Centre Retighten engine mount screws Refer to assembly procedures Clean blower main body and blower air tube |

If running difficulties continue, contact your closest Authorised Service Centre.
