

eco-hydrate[®]

eco-hydrate 100% BIODEGRADABLE

eco-hydrate is made from plant-based ingredients and organic polymers. It has been specifically formulated to be safe for aquatic organisms and the environment in general. All ingredients are completely biodegradable.

eco-hydrate DIRECTIONS FOR USE

Dilute eco-hydrate and apply directly to the soil.
Re-apply monthly during hot weather if required.
eco-hydrate is safe to use on all plants including natives.

SITUATION	RATES	HOW TO USE
Lawns	10ml per 9L watering can	Apply evenly to 4m ² of lawn
Garden Beds & Veggie Patches	20ml per 9L watering can	Apply evenly to 4m ² of garden beds
Pot Plants, Hanging Baskets, Containers	20ml per 9L watering can	Thoroughly water the container so all the potting mix is treated

NOTE: Rinse off any residual product from plant foliage as eco-hydrate only works within the soil.

eco-hydrate[®]

Soil Wetter & Moisture Attractant

ACTIVE INGREDIENT: 270g/L ORGANIC HUMECTANTS,
110g/L ORGANIC SOIL SURFACTANTS

ENRICHED WITH SEAWEED EXTRACT,
FULVIC AND AMINO ACIDS

Cuts
watering by
**UP TO
50%**

- Improves water penetration
- Boosts moisture retention
- Cuts water use
- Reduces plant stress
- 100% biodegradable

eco-hydrate[®]

eco-hydrate is a unique soil wetter and moisture attractant that dramatically reduces the need for watering.

ECO-HYDRATE WORKS IN 5 WAYS

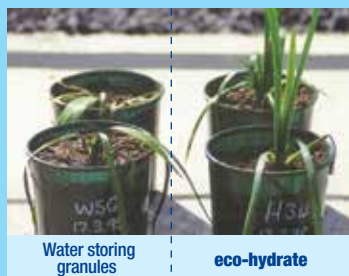

1 **eco-hydrate IMPROVES WATER PENETRATION**

eco-hydrate contains a very effective soil wetting agent to treat hard to wet or hydrophobic soils. It reduces run-off, improves water penetration and the uniform spread of moisture throughout the soil.

2 **eco-hydrate ATTRACTS & STORES MOISTURE**

When applied to the soil **eco-hydrate** absorbs and stores water as microscopic droplets on roots and soil particles. Moisture from all sources including dews and humidity is condensed and stored by **eco-hydrate**, effectively giving plants an extra drink every day. Plants treated with **eco-hydrate** can last up to twice as long before they wilt.

3 **eco-hydrate REDUCES PLANT STRESS**

eco-hydrate is enriched with a blend of seaweed, fulvic and amino acids. Together they enhance antioxidant levels, improve plant functions like root development and reduce stress factors in plants. This is particularly useful when coping with drought stress.

Domestic Lawn in Summer

4 **eco-hydrate MAKES PLANTS MORE EFFICIENT**

Improvement in plant functions from the blend of seaweed, fulvic and amino acids also helps plants to use water more efficiently. As an example one of the added amino acids regulates the opening and closing of pores to minimise moisture loss from leaves.

5 **eco-hydrate IMPROVES SOIL STRUCTURE**

The mixture of seaweed, fulvic and amino acids in **eco-hydrate** also helps boost organic matter in soils, stimulate microbial activity and bind nutrients while improving structure and water holding capacity. Improved plant growth follows.
