SAFETY DATA SHEET

1. IDENTIFICATION OF THE MATERIAL AND SUPPLIER

Brand: Gasmate/Gasmaster/Jackeroo/Buyright
Product (Material) Name: Butane
Other Names: Butyl hydride, Methylethylmethane/Propanol
Manufacturer’s Product Codes: G210, G3210, G4210, G6210, G4210SV, GM040-002/3
Recommended Use: Used as a fuel in gas camping and leisure products
Supplier Name: Sitro Group Australia
Supplier Address: 33-35 Lionel Road, Mt Waverley VIC 3149
Supplier Telephone Number: (03) 9543 9533
Emergency Contact Number: AU - 1300 174 876  NZ - 0800 474 876

2. HAZARDS INFORMATION

Hazard Classification: Classified as a highly flammable, liquefied gas for transport (ADG). Hazardous according to Work Safe Victoria.

Proper Shipping Name: AEROSOLS
GHS Label Elements:

H220 – Extremely Flammable Gas
H280 – Contains Gas under pressure may explode if heated.

Prevention: Keep away from heat/sparks/open flames/hot surfaces – No Smoking.

Response: Leaking gas fire – Do not extinguish unless leak can be stopped safely. Eliminate all ignition sources if safe to do so.

Storage: Store in a well-ventilated place, protect from sunlight.
3. COMPOSITION / INFORMATION ON INGREDIENTS

4. FIRST AID MEASURES

Inhalation
If exposure to vapour, mists or fumes causes drowsiness, headache, blurred vision or irritation of the eyes, nose or throat, remove immediately to fresh air. Keep patient warm and at rest. If any symptoms persist, obtain medical advice. Unconscious causalities must be placed in the recovery position. Monitor breathing and pulse rate and if breathing has failed, or is deemed inadequate, respiration must be assisted, preferable by the mouth to mouth method. Administer external cardiac massage if necessary. Seek medical attention immediately.

Skin
If cold burns are present drench with water and obtain immediate medical advice. Keep contaminated clothes away from ignition sources.

Eye
Wash eye thoroughly with copious quantities of luke warm water. Obtain immediate medical attention.

Advice to Doctor
Treatment should in general be symptomatic and directed to relieving any effects.

Additional Information
N/A

5. FIRE FIGHTING MEASURES

Suitable Extinguishing Media
Smaller LP Gas fires may be extinguished using dry chemical powder type extinguishers or carbon dioxide. Larger LP Gas fires are controlled with use of water via hose reel, hydrants or automated deluge type systems.
Hazards from Combustion Products
Carbon Dioxide, Water Vapour, traces if Carbon Monoxide and Nitrogen Oxides. Fumes, smoke Carbon Monoxide and Aldehydes can be formed during incomplete combustion. Fire fighters may need self-contained breathing apparatus.

Precautions for Fire Fighters & Special Protective Equipment
Evacuate area, remove ignition sources. Cut off gas supply if safe to do so – do not endanger life. DO NOT EXTINGUISH FIRE – allow gas to burn out. Use a water mist to keep the container cool. NOTE: if ignition has occurred and water is not available, the storage container metal may weaken from the heat and may result in an explosion. The area should be evacuated immediately. From a safe location, notify emergency services.

Hazchem Code
2WE (in accordance with 7th edition of ADG code)

Additional Information
Butane is delivered, stored and used at temperatures above its flash point. Avoid all naked flames, sparks, cigarettes etc. In case of fire, immediately alert the fire brigade. Ensure an escape path is always available from any fire. Fires in confined spaces should be dealt with by trained personnel wearing approved breathing apparatus.

If gas has ignited, do not attempt to extinguish but stop gas flow and allow to burn out. Use water spray to cool heat-exposed bulk tanks, and to protect surrounding areas and personnel effecting shut-off. DO NOT USE water jets. Every precaution must be taken to keep containers cool to avoid the possibility of a boiling liquid expanding vapour explosion (BLEVE). Pressured bulk tanks are liable to explode violently when subjected to high temperatures.

6. ACCIDENTAL RELEASE MEASURES

Emergency Procedures
- As this product has a very low flash point any spillage or leak is a severe fire and/or explosion hazard. If a leak has not ignited, stop gas flow, isolate sources of ignition and evacuate personnel.
- Ensure good ventilation.
- Liquid leaks generate large volumes of flammable vapour which is heavier than air, this may travel to remote sources of ignition (eg along drainage systems). Where appropriate, use water spray to disperse the gas or vapour and to protect personnel attempting to stop leakage.
- Vapour may collect in any confined space

Methods and Materials for containment and clean up procedures
If spillage has occurred in a confined space, ensure adequate ventilation and check that a safe, breathable atmosphere is present before entry.
Do not enter a vapour cloud except for rescue; self-contained breathing apparatus must be worn. Wear protective clothing. See Exposure Controls/Personal Protection (section 8) of the Safety Data Sheet. In the event of a leak, contact the appropriate authorities. Small quantities of spilled liquid may be allowed to evaporate. Vapour should be dispersed by effective ventilation.
7. HANDLING & STORAGE

Precautions for Safe Handling
- Endure good ventilation.
- Avoid inhalation of vapour.
- Avoid contact with liquid.
- Avoid contact with eyes.

Safe Handling Information
Classified as a 2.1 (flammable gas) Dangerous Substance for the purpose of transport. Refer to relevant regulations for storage and transport requirements. Not to be loaded with explosives (Class 1), flammable liquids (Class 3) in bulk, flammable solids (Class 4), oxidising agents (Class 5), or radioactive substances (Class 7).
Usually stored as liquid under pressure. Store in a cool place and out of direct sunlight. Store in a well ventilated area. Store away from sources of heat or ignition, oxidising agents and combustible materials. Keep containers closed at all times — check regularly for leaks.

Spills
Clear area of all unprotected personnel. Wear protective equipment to prevent skin and eye contamination and inhalation of vapours. Shut off all possible sources of ignition. Increase ventilation. Stop leaks if possible. Separate leaking container and stand so that only gas escapes. Use water spray to disperse gas clouds but avoid spraying water directly on leaking container as this will increase leakage. Contain using sand and soil — prevent run off into drains or waterways. If contamination of sewers or waterways has occurred advise the local emergency services.

Bulk Storage
If the quantity exceeds 100kg net, it is recommended that they be kept either:
- In groups of not more than 100kg net and at least 6m from each other.
- In, or directly ventilated to, the open air and separated by at least 3m from any combustible material.
- In an enclosure preventing the projection of containers if involved in a fire.
- At least 5m from any other Class of dangerous goods or any combustible material.
- At least 3m from any fixed ignition source (other than electric ceiling lighting).

Fire/Explosion Hazard
Highly flammable liquid and explosive gas. Evacuate area. Attempt to cut off source of gas rather than put out fire. If safe to do so, remove containers from path of fire. Keep containers cool with water spray.

Other Information
Fire Prevention —
Where appropriate, ensure equipment is electrically bonded and earthed to prevent static accumulation. Explosive air/vapour mixtures may form at ambient temperature. Note: product spilt on clothing may give rise to delayed evaporation and subsequent fire hazard.

Storage and handling of butane is controlled via the requirements of AS/NZS1596 (Storage and Handling of LP Gas). Please refer to Australian State and Territory Dangerous Goods Regulations.
8. EXPOSURE CONTROLS / PERSONAL PROTECTION

National Exposure Standards
Ensure adequate ventilation. Avoid, as far as reasonably practicable, inhalation of vapour generated during use. The vapour is an asphyxiant at high concentrations. If vapour is generated, its concentration in the workplace should be controlled to the lowest reasonably practicable level. Work Safe Australia recommends an Exposure Standard of 800ppm for butane for an 8 hour time-weighted average (TWA).

Biological Limit Values
N/A

Engineering Controls
Store containers in an upright position (even when empty); keep away from heat sources; do not drop. Store away from oxidising substances (eg pool chlorine). Containers must be secured in an upright position for transport, as per ADG Code.

Respiratory Protection
If operations are such that exposure to vapour, mist or fume may be anticipated, then suitable approved respiratory equipment should be worn. The use of respiratory equipment must be strictly in accordance with the manufacturer’s instructions and any statutory requirements governing its selection and use.

Body Protection
Wear suitable gloves and overalls to prevent cold burns and frostbite. In filling operations wear protective clothing including gloves, safety goggles or face shield. When handling cylinders wear protective gear.

10. STABILITY & REACTIVITY

Chemical Stability
Stable at ambient temperatures.

Hazardous Reactions
Hazardous polymerisation reactions will not occur.

Conditions to Avoid/Incompatible Materials
Avoid contact with strong oxidizing agents (ie: Chlorine, Pool chlorine, Nitric Acid, etc).

Hazardous Decomposition Products
Incomplete combustion will generate hazardous gases, including carbon monoxide.

11. TOXICOLOGICAL INFORMATION

Acute & Chronic Health Effects
None.

Possible Routes of Exposure/Range of Effects following exposure

- **Inhalation**
  Low vapour concentrations may cause nausea, dizziness, headaches and drowsiness. May have a narcotic effect if high concentrations of vapour are inhaled. High vapour concentrations may produce symptoms of oxygen deficiency which, coupled with central nervous system depression, may lead to rapid loss of consciousness.

- **Abuse**
  Under normal conditions of use the product is not hazardous, however, abuse involving deliberate inhalation of very high concentrations of vapour, even for short periods, can produce unconsciousness and/or result in a sudden fatality.

- **Skin**
  Will cause cold burns and frostbite if skin contact with liquid occurs

- **Eye**
  Will present a risk of serious damage to the eyes if contact with liquid occurs

Dose, Concentration or Conditions of Exposure likely to cause injury

- Saturated concentration of atmosphere may cause asphyxia

Delayed Effects
N/A
12. ECOLOGICAL INFORMATION

Eco Toxicity
Not toxic to flora, fauna or soil organisms. Will not cause long term adverse effects in the environment and is not
dangerous to ozone layer. Unlikely to cause long term effects in the aquatic environment.

Mobility
Spillages are unlikely to penetrate the soil. The product is volatile/gaseous and will partition to the air phase.

Persistence/Degradability
Unlikely to cause long term adverse effects in the environment.

Bio accumulative Potential
This material is not expected to bio accumulate.

13. DISPOSAL CONSIDERATIONS

‘EMPTY’ container warning: ‘empty’ containers retain residue (liquid and/or vapour) and can be dangerous. DO NOT
PRESSURISE CUT, WELD, BRAZE, SOLDER, DRILL, GRIND OR EXPOSE SUCH CONTAINERS TO HEAT, FLAME,
SPARKS, AND OTHER SOURCES OF IGNITION, THEY MAY EXPLODE AND CAUSE INJURY OR DEATH.
Refer to State And Waste Management Authority.

14. TRANSPORT INFORMATION

UN Numbers 2037 AEROSOLS

Class 2.1 Flammable Gas
Subsidiary Risk Nil
Packaging Group N/A
HAZCHEM Code 2WE (in accordance with 7th Edition ADG code)
Forbidden for transport on passenger aircraft.

Transport of LP Gas is controlled in accordance with the requirements of the Australian Dangerous Goods Code.

15. REGULATORY INFORMATION

Not classified using the criteria in the Standard Uniform Scheduling of Drugs and Poisons.
16. OTHER INFORMATION

- Ensure users and operators understand the flammability and potential explosive hazards associated with the storage and handling of liquefied petroleum gas.
- Contact with liquid may cause cold burns and/or frostbite.
- This information is based on our current knowledge and is intended to describe the product for the purposes of health, safety and environmental requirements only. It does not constitute a guarantee for any specific property of the product.
- SDS Sheet prepared and last revised August 2017.
